

Privacy Policy

This privacy policy applies to the Hardware Info app (hereby referred to as "Application") for mobile devices, created by Radoslav Matev (hereby referred to as "Service Provider") as a free service. This service is intended for use "AS IS".

Summary

The Application does not collect, transmit, sell or share any personal data. It does not have permission to access the internet, and it contains no analytics, advertising or tracking services. Everything the Application shows is read from your device and displayed only on your device.

Information the Application Reads on Your Device

To display hardware information, the Application reads the following directly from your device. This information is shown only on your screen. It is never sent anywhere, stored outside your device or shared with anyone:

- Device, processor, memory, storage and operating system details (such as model, processor cores and frequencies, Android version and security patch level)
- Battery status (such as charge level, temperature, health, voltage, charge cycles and capacity)
- Display and graphics details (such as resolution, refresh rate and graphics processor)
- Media capabilities (such as supported audio and video codecs, audio passthrough support and content protection (DRM) levels)
- Camera hardware characteristics (such as resolution, focal length and aperture). The Application does not take photos, record video or show a camera preview.
- The list of sensors and their live readings
- Wi-Fi details: connection status, network name, signal strength, IP address, MAC address (where Android allows it) and the list of nearby Wi-Fi networks
- Mobile network details: SIM card status, SIM and network operator names and codes, whether a SIM card is physical or eSIM, roaming status, network type, signal strength, the identifiers and signal of the serving and nearby mobile network cells, and the mobile data connection status and IP address. The Application does not read your phone number, IMEI or other SIM card or device identifiers.

Permissions

The Application asks for the following permissions only when you open the related tab. You can deny or revoke each of them at any time in your device settings; the rest of the Application keeps working without them:

- Camera - to read the characteristics of the device's cameras. No images are captured.
- Location (precise) - Android requires it to show the name of the connected Wi-Fi network, the list of nearby Wi-Fi networks and the nearby mobile network cells. The Application does not determine, use or store your location.
- Phone - to show the SIM cards, the mobile network operator and the network type. Android lists this permission as "make and manage phone calls"; the Application does not make, receive or manage calls, and does not read your phone number, call log or device identifiers.
- Physical activity - Android requires it to show the readings of the step counter and step detector sensors.

The Application also uses Wi-Fi state and network state access, which Android grants automatically, to read the Wi-Fi and mobile data connection details and to scan for nearby Wi-Fi networks.

Data Stored on Your Device

The Application saves only two settings on your device: the language you have selected and whether you have confirmed the notice about data accuracy shown on first launch. They contain no personal information. If backup is enabled on your device, Android may include them in your device backup, under Google's terms. They are deleted when you clear the Application's data or uninstall it.

Third Party Access

The Application does not use any third-party services, libraries for analytics or advertising, and does not share any information with third parties.

The Application is distributed through Google Play. Google may process information such as installs and crash reports under its own Privacy Policy (<https://policies.google.com/privacy>). The Service Provider only has access to the aggregated, anonymous statistics that Google Play Console provides.

The About screen contains a link to this Privacy Policy. Opening it launches your web browser, outside the Application.

Accuracy of Information

The information shown is read from your device and its manufacturer's software. Depending on the manufacturer and Android version, some values may be missing, estimated or inaccurate. The Application shows a notice about this on first launch. The information is provided for reference only.

Opt-Out Rights and Data Deletion

Because the Application does not collect any data, there is no data held by the Service Provider to delete. You can remove the settings stored on your device by clearing the Application's data or by uninstalling it, using the standard processes of your device or of Google Play.

Children

The Application is not directed at children under the age of 13. It does not collect personal information from anyone, including children.

Security

No information read by the Application leaves your device, so it remains protected by your device's own security.

Changes

This Privacy Policy may be updated from time to time. Any changes will be published on this page with a new effective date. You are advised to review this Privacy Policy periodically.

This privacy policy is effective as of 2026-09-27

Your Consent

By using the Application, you agree to this Privacy Policy.

Contact Us

If you have any questions regarding privacy while using the Application, please contact the Service Provider via email at raze79@gmail.com.
