

Web Developer at CritSend

If you're looking for a job in which somebody tells you what to do and you can switch off your brain: good news! You can already stop reading and go spend the next 5 minutes here.

If you are passionate about building scalable web services, if you prefer freedom over safety, if you take pride when creating and building new products, then let's talk.

We're looking for a web developer to join us. You need to be comfortable working with a variety of technologies on the web, from Redis to Javascript. A lot of our technical stack is based on Python. You need to be familiar with the fundamentals of distributed systems.

What we're looking for

- Solid knowledge of Python and MVC architecture. Django is preferred.
- Experience with Javascript (not only jQuery).
- Very Good unit testing practices (seriously).
- Ability to communicate clearly your progress and challenges.
- Passion for sharing your knowledge.

Work from where you're the most productive

- Life is too short to commute every day. We only ask you to be willing to travel once in awhile if required, wherever in the world we decide to meet.
- We offer competitive compensation and benefits. We share profits.

About CritSend

CritSend is a distributed company with employees in Europe and the USA. We are 6 people. We have been around for 5 years. We have doubled our revenue every year (and we don't intend to stop). We operate critsend.com and inboxbooster.com.

We want to keep building cool technologies, we don't set any limits to what we'll do in the future. We love the way we operate, if you feel you would too: get in touch!
