

Privacy Policy — Simplest Calendar

Effective date: 27 September 2026

This policy explains what Simplest Calendar does with your information. The short version: **your notes never leave your device unless you yourself send them somewhere**, and the developer never sees them.

What the app stores

All of the following stay on your device, in the app's private storage:

- **Day notes.** The text you write for a calendar day.
- **Settings.** Your chosen text size, theme colour, whether the calendar is light, dark, or matching the phone, automatic-backup folder, and whether optional colour packs have been unlocked. The app also keeps a few small local flags (for example whether you dismissed the backup prompt, and when a backup last succeeded) so Settings can show the right status.
- **Reminders.** If you set a reminder, the app stores the day and time, and copies the first line of that day's note into the notification so the reminder can say what it is about. Snoozing a reminder keeps that same wording until it fires. Nothing about your reminders is sent to the developer.
- **A safety copy.** A last-known-good copy of your notes and reminders, kept so they can be put back if the app's ordinary storage is wiped.
- **Home-screen widget.** The app keeps a local display cache of the next 60 days (notes, whether a reminder is set, and the colours and text size needed to draw the widget) so a home-screen widget can show them without opening the app. That cache is written even if you have not added the widget yet.
- **Crash logs.** If something unexpected goes wrong, a short record of the error (time, where in the app it happened, a description, and a technical stack) is kept on the device so you can copy it, or include it with Send feedback, if you send a bug report. A copied or emailed report also includes the installed app version. These logs are not uploaded. They are not a crash-reporting service. Send feedback includes them only when you turn that on.

The app has no user accounts and no sign-in. The developer has no server and receives nothing from the app — not your notes, not your crash logs, not anything about how you use it. Android's own backup of app data is turned off, so those copies are not sent to Google Drive either.

What the app does *not* do

- It does **not** collect your notes or send them to the developer.
- It contains **no** analytics, advertising, tracking, or third-party crash-reporting services (for example Firebase Crashlytics or Sentry).
- It does **not** access your contacts, location, camera, or microphone.

It does read two ordinary device facts, both kept on the device: the phone's timezone (so a reminder set for 18:00 still fires at 18:00 after a daylight-saving change) and the installed app version (shown in Settings, included if you copy crash logs, and filled in when you tap Send feedback).

Using the calendar, writing notes, setting reminders, and backing up to a folder you choose do not require an internet connection. The only conversation with Google is described below.

Google Play purchases

Colour packs are an optional unlock. The app uses **Google Play Billing** for that, under [Google Play's privacy policy](#).

When Play is available, each launch asks Play for the pack prices and whether this Google account already owns them, so a reinstall can unlock packs without opening Settings. Buying a pack or tapping Restore purchases uses the same channel so Play can take payment and remember that you own the packs. That conversation is with Google. The developer sees Play Console purchase records the same way as any other Play app — not your notes, reminders, or crash logs.

You do not need to buy anything, and you do not need a network connection, to use the rest of the app.

Permissions the app asks for

- **Notifications.** So the app can show you a reminder you have set (and vibrate when it arrives).
- **Alarms/reminders (exact alarms).** So a reminder rings at the exact time you chose, not roughly around it, and so the launcher icon can switch to today's date at midnight.
- **Restart on device boot.** So a reminder you have already set still rings after you restart your phone, and so the launcher icon is still today's date, without needing to reopen the app first.
- **Google Play Billing.** So the app can ask Play about colour-pack prices and ownership, as described above.

None of these permissions let the app send your notes to the developer.

Backups and copies you send yourself

These are entirely under your control:

- **Automatic backup** (optional). If you turn it on, you choose a folder using Android's system folder picker, and the app writes a backup file (a zip containing your notes and reminders) into that folder. The file goes only where you pointed it. If you choose a folder that a cloud service syncs (for example a Google Drive or Dropbox folder), that service will handle the file under **its own** privacy policy — the app itself still sends nothing anywhere.
- **"Back up now" / sharing**. This hands the backup file to Android's share sheet, and *you* choose where it goes (email, cloud storage, another device, etc.). The receiving app or service handles it under its own privacy policy.
- **Restore**. You pick a backup file with Android's system file picker; the app reads only the file you selected.
- **Copy crash logs**. If you copy the on-device crash log, it is placed on the clipboard. It leaves the device only if you paste or send it (for example in an email).
- **Send feedback**. This opens an email to the developer with the app version filled in. A checkbox, off unless you turn it on, can include the on-device crash log. The message leaves the phone only because you sent it. If the phone has no email app, the same text is handed to the share sheet instead, and you choose where it goes.

Data retention and deletion

Your notes, reminders, settings, safety copy, widget cache, and crash logs stay on your device until you delete them. You can clear crash logs from Settings. To delete everything the app holds, clear the app's data in Android settings or uninstall the app.

Backup files you have created are ordinary files in the folder you chose — they belong to you, and you can delete them there at any time. Uninstalling the app does not delete backup files you have made.

Children

The app does not collect personal data from anyone, including children.

Changes to this policy

If the app ever changes in a way that affects this policy (for example, if a future version adds an online feature), this policy will be updated and the effective date above revised before that version is released.

Contact

If you have any questions about this policy, contact the developer at **Baganovski@gmail.com**.
