v0.4.1

HootBoard Android Kiosk

Installation Instructions

Summary

This document contains information to setup & install the early alpha release of our Kiosk Application for Android. This application will run on any Android device that meets our hardware and software requirements. The same app will in the future run in the application layer of a customized HootBoard Android operating system that is currently in early development.

Hardware/Software Requirements

➔ Android Version: **7 (API 24) or later.**

➔ Minimum Display Resolution: **1280 x 800**

➔ Minimum RAM: **2 GB**

Installation

You can install the APK directly onto the device without any other prerequisites.

Launching

This application is designed to serve as both a regular app and a launcher. Upon installation and opening, press the home button to activate the launcher selection modal. From there, you can designate the app as the default home app. By doing so, upon rebooting the device, the app will automatically open and be readily available.

Permissions

The application requires both **accurate location** & **camera** permissions to operate effectively. Upon installation and initial launch, it is important to grant both permissions for the app to function properly. The app will be unable to operate if permissions are not granted.

Customization

➜ The application follows the pixel density of the device. If you modify the **Display & Text** size within the Android settings, the app will dynamically adjust its layout accordingly.

➜ An in-built keyboard is bundled with the app. To enable it, you must first disable the default android keyboard (Go to all apps in settings and find the default keyboard, stop & disable it) and add HootBoard Keyboard to the virtual keyboards list from on-screen keyboard settings.

Features not available

As the application is currently in the early stages of development, certain features are not yet available. Below is a list of some of these features:

➜ Default attractor loops.

➜ List functionality

➜ "Send this to me" option in hoot display view.

Where to send feedback?

Feel free to use any of these following methods to share your thoughts and suggestions with us.
