

SPHERO MINI-BALL

Description: These little robots can be controlled by iPad to roam around the room! Change the ball's light with the color-gradient selector and use the touch direction control to steer the robot around the room!

Things to try:

- **Obstacle Course:** Using the objects around you, lay out things for your robot to avoid, like cups, pens, chair legs, and more! Then challenge yourself (or others) to steer the ball from start to finish in a timed challenge!

- **Tracing Challenge:** On scratch paper, draw out some big letters and shapes. Then, place the paper on the floor and try to make your robot ball trace them!
