

Rhode to Regenerative

Call for Poster Abstract Submissions

Rhode to Regenerative: From Forest to Sea

Regenerative Agriculture Conference

We invite poster abstract submissions from students for poster presentations at the first Rhode to Regenerative: Regenerative Agriculture Conference. The theme for the meeting is "From Forest to Sea: It's all regenerative!" Abstracts related to both ocean (Seaweed farming! Multitrophic Aquaculture! Shellfish farming! And more!) and terrestrial regenerative agriculture (Agroforestry! Polyculture! Alley Cropping! Composting and Vermiculture! And more!) are welcome. **We also welcome submissions that report interdisciplinary work such as economic, cultural, or policy aspects of regenerative agriculture.**

Abstract guidelines

Please include your name, your affiliation, and the title of your abstract with your submission. The body of the abstract may be up to 400 words maximum.

The abstract should report specific new knowledge (quantitative, qualitative, or conceptual) or focus on a project related to regenerative agriculture on land or sea. The results, outcomes, or knowledge may be preliminary, but what you report should be specific rather than vague.

The content of the abstract should

Include sufficient background information for the reader to understand the motivation for the work to be presented.

Clearly articulate the goals and objectives of the work. Where appropriate, specific research questions and hypotheses should also be clearly articulated.

Clearly articulate the approaches or methods employed to arrive at the results, outcomes, or conclusions produced by the study. For abstracts reporting on a research project, the specific methods used should be summarized; for more conceptual, theoretical, applied, or other projects, the general approach or framework should be summarized.

Clearly summarize key outcomes or contributions from the work; these may be in the form of quantitative results (e.g., for research-focused studies) or qualitative outcomes or knowledge produced.

Conclude with one or more regenerative agriculture relevant take-home messages.

Helpful information about abstract entry

- For every author listed, include their name, institution, and email.
- The presenting author is the corresponding author who will receive all communications, including acceptance and scheduling notifications.
- Questions? Contact Laura Meyerson, lameyerson@uri.edu
