How to Add an Unordered List to your HTML

The code below looks like the image to the right. It produces bullet pointed items.

```
<ul>
  <li>Lauaki</li>
  <li>Bailey</li>
  <li>Essendon</li>
</ul>
```

- Lauaki
- Bailey
- Essendon

Here is an example of how I would use an unordered list to my webpage:

This is my second web page created using HTML in notepad and I now know how to use colour

I can even use hexidecimal to change colours

Here is a **link** to my school

I can even put tables in now!

With all the new resources made available in the classroom its no wonder why students are lining up to trial them. We have so many students keen to try or purchase them that we have had to take orders:

1. Connor
2. Lamonte
3. Monrovia
