Date: 18/01/2025

Status: Accepted

Feedback (Why accepted, why rejected?):

The report effectively explores pricing models for generative AI, offering alternatives. The presented solutions align with the goal of balancing accessibility, fairness, and sustainability. Additionally, the plan to host the API on platforms like SingularityNET Marketplace, AWS Lambda, and Google Cloud Functions, alongside providing an open-source model similar to Llama, further contributes to accessibility and inclusivity.

Although the feedback could've been further elaborated on in the report, the inclusion and discussion of relevant topics, such as bias mitigation, liability, and transparency, in the presentation are good.

If rejected, suggested changes:
