

Ag Drought Resiliency Projects Application

Drought and limited water supplies are impacting agricultural operations throughout Colorado. This program serves to address several gaps in funding and support for incubator projects on farms and ranches that can improve agriculture's resilience to drought. We will provide a quick source of funding for projects for the 2024 season.

In all projects, we want to monitor and recover water use data from the participant's property. These projects will serve as a "proof of concept" as to whether certain strategies are effective and scalable. We also encourage projects to include data related to economics. How cost effective are these strategies that we are studying compared to the rest of the operation? You can learn about the projects we funded in 2023 here: <https://www.coagwater.org/drought-resiliency-projects>

The deadline for 2024 projects is January 2. All applicants must have a conversation with CAWA staff about their project to be considered for funding. Please email coagwater@gmail.com or call (720) 244-4629 to set up an appointment.

Name of Applicant:

Mailing Address

Email

Phone Number

Which county will your project take place in?

What water related issue will your project address?

Describe your project (what do you want funding to do, and why?):

How much funding are you requesting for your project?

Include a project budget with your application in a separate document. All applications need a detailed budget demonstrating how the money will be spent.

If awarded funds, you will agree to cooperate with the Colorado Ag Water Alliance, by providing information upon request to help evaluate the success of the project.

Signature of Applicant

Date

Complete application and supporting documents (budget) should be sent by email to:
