KEY SKILLS & ACHIEVEMENTS

Effective Communication

- Good communication skills gained from working remotely and regularly working with outsourced tech teams in India.
- Explained and demonstrated complex JavaScript theory such as closures to apprentices and junior developers in an easily understandable manner.
- Regularly involved with planning/discovery project meetings with stakeholders to talk about the feasibility of their project ideas and help come up with solutions.
- Negotiating project scope with product owners, designers, and delivery managers. Persuading stakeholders to move lower priority features to a different phase to be able to deliver on time.

Leadership & Team Working

- Covered as a temporary scrum master for the weekly sprints when the designated scrum master was away.
- Training and pair programming with new apprentices/junior developers with no prior knowledge of coding.
- Working regularly with designers, product owners, and colleagues on large projects.
- Able to integrate with different project teams quickly, due to being placed into a project late by resource managers often.
- Positive attitude even when weekly sprint has missed the desired deadline due to late high priority changes.

Organisation & Time Keeping

- Involved in weekly sprint planning, and being able to complete core tickets on time.

Adaptability & Initiative

- Learned Angular 1 framework to a sufficient level quickly after joining BT.
- Learned React and Redux when projects moved from Angular 1 to React.
- Automatically working on tickets from the sprint backlog when all core sprint tickets have been completed.
- Constantly building/working on my own projects when I discover something new.

PROGRAMMING TECHNOLOGY

- **UI:** HTML, CSS, BEM, TailwindCSS, PostCSS, SASS, and LESS.
- **JavaScript:** ES5, ES6, React, Redux, Socket.io, NextJS, and Typescript.

- **Build tools & Task runners:** Webpack, Babel, ESLint, NPM, Gulp, Grunt, and Bower.
- **Testing:** Cypress, React testing library, Jest, Chai, Enzyme, and Sinon.
- **Server:** Node, Express, and Puppeteer.
- **Source control:** GIT, and SVN.

WORK HISTORY

2018 Oct – Present: VIOOH

Responsibility:

- Worked as a Front-end developer for a global digital out-of-home advertisement company.
- Building, refactoring and maintaining the new out-of-home application that allows users to purchase and/or sell digital advertising space.
- Negotiating project scope between designers, product owners, and delivery managers.
- Agile sprint planning.

2015 Mar – 2018 October: BT Plc

Responsibility:
