Inter-Dimensionals -- Here is something else I thought you might like to take a look at. But, remember, it's 1948 speculation -- Inter-Dimensional:

In 1948, Dr. Meade Layne of the Borderland Science Research Associates, San Diego, California, started collecting data on UFO's and similar phenomena. He supported the fourth dimensional theory of origin. BSRA literature explained his concepts: "Aeroforms (saucers) are best understood as 'emergent'; that is, they emerge into our plane of perception from a space-time frame of reference which is different from ours. This process may be described as a conversion of energy and a change of vibratory rates. It appears to be, and definitely is what we call a solid substance, and so remains until the vibratory rate is again converted. The 'steel' of a landed disc is 'etheric steel,' and its copper 'etheric copper.' Just as there is a spectrum of sound and color so there is also a spectrum of tangibility, ending in forms of matter which are too dense to be touched. The ordinary matter of our plane is rarefaction; the interspaces between the nucleus and the electrons are relatively enormous. This extremely dense matter of the etheric passes through earth substance much as wind or water would flow through a screen with meshes a mile wide. But if the vibratory rate of an etheric object is slowed down, it becomes less dense and enters our field of vision." Final comment -- and again from Vallee "Most witnesses are not primarily reporting an object or a craft, they are reporting a light, a massive, multicolored, intense, pulsating light, a playful, fascinating, impressive, hypnotic light that is accompanied by strange sounds. In other words, UFOs may be unidentified, but they are not flying, as birds and airplanes fly and they do not always behave

as material objects." "How much do we _know_ from the available scientific literature about the effects of strong, pulsed, colored lights and other electromagnetic radiations, such as microwaves and gamma rays, on the human brain and on the major nerves? Pitifully little. Until this area is fully explored, we will only have a poor understanding of the physics of UFO's."

[Please note: "Starchamber" and "brain buzzers" do use pulsed lights and electromagnetics to produce various "experiences", including heightened awareness and experiences similar to the UFO experience. A note of interest--

Persinger and his helmet (OMNI 12,88) "What surprised Persinger most, however, was the discovery that his subjects found the experiments so pleasurable that they kept coming back for more. 'By stimulating the temporal lobes,' Persinger says, 'we have achieved a widening and deepening of the emotion they associated with the experimental experience.' In fact, after several sessions, Persinger found it took little to send them aloft -- subtle visual clues, background music, even the presence of a cross could trigger the mystical state of mind." Vallee may have a point -- and, here we have clinical proof that something as simple as a cross (symbol) can trigger a reaction. Evolutionary? Could be -- are we subconsciously trying to adapt to a world that contains higher amounts of artificially induced energies that could be affecting our minds? Or, is there a true phenomenon and a "false" phenomenon at work? Speculation is endless.....
