Abstract (English: 10 PT)

Purpose: Clearly state the main purpose of your research. What problem are you addressing or what question are you answering? Provide brief context on the relevance of your topic. This helps the reader understand why your research is important.

Methods: Briefly describe the methods you used to conduct your research. This should be a concise summary of your approach, including any specific techniques or tools you used. Avoid going into too much detail; the goal is to give the reader a quick insight into your overall approach. This part is usually written in the past simple tense.

Results: Summarize the key findings of your study. Highlight the most important results that will help the reader understand your conclusions. Depending on the length and complexity of your research, you may not be able to include all results here. Focus on the findings that are most relevant to your research question.

Conclusions: Discuss the main conclusions of your research. What is your answer to the problem or question you posed at the beginning? Mention any important limitations of your study and provide recommendations if relevant. This part should give the reader a clear understanding of the central point that your research has proved or argued.

Corresponding Author: Corresponding author's last name, email

1. Introduction (12 pt)

The introduction should contain (in sequence) a general background, a state-of-the-art review as the basis for a scientific novelty statement of an article, a statement of scientific novelty, and a research or hypothesis problem. At the end of the introduction should be written the purpose of review of the article. In

the format of scientific articles, it is not permitted to have a literature review as in the research report but is manifested in the form of a state-of-the-art review to show the scientific novelty of the article.

Whenever you would like to refer from the reference, for example (Brennan et al., 2008) in the text. According to McKibbin (2007) this is only an example how to cite from the reference list.

2. Implementation Method (12 pt)

The methods used in problem solving include analytical methods. The methods used in the completion of the study are listed in this section.

3. Results (12 pt)

Results and discussion contain the results of the implementation of community service activities along with the discussion. Write down the findings obtained from the results of the implementation that has been done and must be supported by adequate data.

Table 1: Example Table 1

Header 1	Header 2	Header 3
X	1.1	1.05
Y	10.4	0.25

Tables, graphs and figures should be written in a script according to the systematic order of presentation. Tables (example Table 1) and figures (example Figure 1) should be numbered consecutively in accordance with their appearance in the text. Tables are captioned on top of the table body and place any table notes below the table body with proper indications to the contents in the table body (if needed). Figures are captioned at the bottom of the figures.

All graphs included in this manuscript have to be cited and integrated with analysis and/or its justification/significance with the programs/activities of the community engagement. All graphs should be relevant with the study. Graphs created with Microsoft Excel should also be sent in their original Excel file. Present graphs in 2D (not 3D), without shadows or other effects, and without gridlines.

Figure 1. LDL level pre-test and pos-test.
 Different notation shows significant differences ($p < 0.05$). K0:

Photos and figures

All figures and photos included in this manuscript have to be cited and integrated with analysis and/or its justification/significance with the programs/activities of the community engagement. All photos and figures should be relevant with the study. If a group of photos or figures shows a process, the group is considered 1 (one) figure. Each group of figures have to be prefaced with a description which links the figures. Relevant documentation with a focus on community empowerment activities. The minimum resolution of photos and images is 300 dpi with JPEG extensions (.jpg). Use image processing software to check dpi.

4. Discussion (12 pt)

Provide conclusions on the level of achievement of targets for community empowerment activities. Providing conformity to methods of community empowerment with problems, needs, and challenges that exist in the area of community empowerment activities. Give conclusions about the impact and benefits of community empowerment activities. Provide advice for further community empowerment.

6. Conclusion (12 pt)

Explain conclusions and suggestions. The conclusions illustrate the answer of the hypothesis and / or the purpose of the research or findings obtained. The conclusion does not contain a loop of results and discussion, but rather a summary of the findings as expected in the goal. Suggestion presents the things

that will be done related to the next idea of the implementation of community service and engagement.

Acknowledgement

Insert acknowledgment, if any. The preferred spelling of the word “acknowledgment” in American English is without an “e” after the “g.” Use the singular heading even if you have many acknowledgments. Sponsor and financial support acknowledgments are also placed here.

Declarations (12pt)

- Author contribution : The authors conducted all aspects of this research, including the conceptualization, methodology, data collection, analysis, and interpretation of results. The authors also undertook the writing, reviewing, and editing of the manuscript, ensuring its academic rigor and coherence.
- Funding statement : This research received no specific grant from any funding agency in the public, commercial, or not-for-profit sectors
- Conflict of interest : The authors declare no conflict of interest. Additional information: No additional information is available for this paper.

References must follow the style detailed in the APA 7th edition (<https://apastyle.apa.org/style-grammar-guidelines/references/examples#>).

References should be the most recent and pertinent literature available (about 5-10 years ago). We suggest the use of ENDNOTE, MENDELEY, ZOTERO, or EASYBIB for easy citation. Do not make a footnote or endnote in any format. The line spaces for the references should be 1.0 and the indentation is the opposite of the body text's indentation. Make sure that all references mentioned in the text are listed in the reference section and vice versa and that the spelling of author names and years are consistent.

Please check your references:

- 1) Capitalisation for its titles and journal/publication type categories.
- 2) Use the full doi link if available.
- 3) Minimum 25 citations of current (published within the past 5-10 years) literature. 80% of the citations must be journal articles.
