

MUN Speech Organizer

Country: Lebanon

Committee:

Topic: Water crisis because of climate change

1. Research to Figure out the position of your country (This is from your position paper.):

- Essential research question: What is your country doing about reducing the effects of climate change in perspective to water usage and amounts?
- Or is your country allied with another country that is reducing the effects of climate change in perspective to water usage and amounts?
- My country's solution to the topic is: Privatizing the water and sources to keep them maintained.

Use your research to write a speech. Your speech should be between one and one and a half minutes long. Be sure to time and rehearse your speech.

Start your speech with: *Honorable Chair and Fellow Delegates,*

1. Opening

2. The country of Lebanon believes their water supply is rapidly decreasing and safe drinking water will be hard to come by for 71% of Lebanon's population by the summer of 2022 because climate change makes water evaporate and on the coast of Lebanon water sources are being contaminated with seawater.

3. We believe that privatizing the water and institutions related should be done to help solve the problem of scarcity of safe water because private funding can do more than just help the government with what it has already done to institutions for filtering water. It can make it so more people have access to safe water.

Conclude your speech with: *Thank you honorable chair.*
