

Save this project as 'FixedStyle'

The following program WILL actually run:

```
//First & Last Name
//Period #
public class FixedStyle{public static void main(String[] args) {/*Get
animal*/String animal ="cow"; /*Get Place*/String place= "moon" ;
/* print sentence */System.out.println("The " +animal+ " jumped over the "
+ place+ ".");
}}
```

However, this is some ugly code. Clean it up with some proper spacing and indentation to make it look readable.
