

UK and Brexit

In the UK the number of Eurosceptics and surveys show a result of up to seven points in favor of Brexit. The British are getting carried away by the siren songs that are emitted from conservative newspapers like 'The Sun', in which it is argued that "a liberation from the dictatorship of Brussels" will make them richer, be safer and own his destiny, like the US or Canada. And they say offhandedly, as if the future could be bought and you know what is coming. Help and much to substantiate these chimeras continuous failures happening in the EU, as the situation in Greece or excessive unemployment that exist in Spain. And many whites who think, with some reason, that France and Germany administered the EU like a farm that belongs to them. But newspapers intentionally omitted pro Brexit capital aspects, such as the breakup of UK with Europe could take your own break: Scotland, staying outside the EU, and threatens a new independence referendum; Northern Ireland is not satisfied and Gibraltar remain in limbo yet to be defined. 23-J -day of votación- only two things can happen: UK or stay inside or in pieces to stay out.
