Neuropathic analgesics are effective in treating nerve-related pain. They work by providing fast relief for pain caused by a damaged nervous system.

The form of neuropathic pain is caused by injury to the various levels of the nervous system— brain, the spinal cord, and marginal nerves. Damage precisely to nerves outside of the brain and spinal cord reasons what is known as marginal neuropathy. People possibly experiencing chronic neuropathic pain include women, people older than 50 years of age, people with less-formal teaching, farmers or manual workers, rural residents, people unable to work, and those who are economically deprived.

Reasons for Neuropathic Pain

There are four main reasons for neuropathic pain that includes:

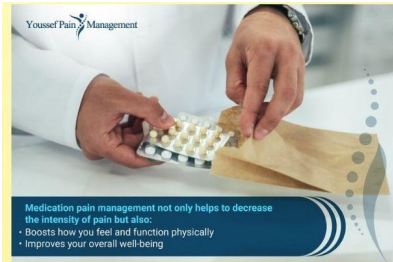

- Disease:-** Many illnesses can cause neuropathic pain, but 30 to 35% of neuropathic pain cases are triggered by diabetes. In fact, diabetic peripheral neuropathy affects nearly 40 to 50% of adults with diabetes during their lifetime. Other illnesses include Parkinson's disease, multiple sclerosis, fibromyalgia, Sjogren's syndrome, complex regional pain syndrome, facial nerve complications like trigeminal neuralgia that causes extreme neuropathic pain to the face, rheumatoid arthritis, lupus, chronic inflammatory demyelinating polyneuropathy, Guillain-Barre syndrome,

vasculitis, liver disease, kidney disease, connective tissue disorders, multiple myeloma, an underactive thyroid, alcoholism, other forms of cancer, and more. Therefore, you should not ignore taking **neuropathic pain treatment**.

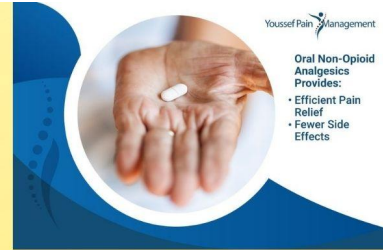

- **Injury:-** Even after a muscle, tissue, or joint injury heals, or hip, back, or leg problems improve, injury to the nervous system can continue. Trauma from spinal damages like herniated discs and spinal cord solidity can injure nerves around the spine as well, which is causing neuropathic pain. You have to be careful about proper [analgesics for neuropathic pain](#).
- **Infection:-** Lyme disease, shingles, syphilis, hepatitis B and C, Epstein-Barr virus, leprosy, diphtheria, and AIDS or HIV can also trigger neuropathic pain.
- **Limb loss:-** Phantom limb syndrome can happen after a leg or arm is removed. The nerves near the elimination send improper signals to the brain and make it feel as though the absent limb is in pain. It can also be felt in toes, fingers, ears, or other portions of the body.

What Treatments are Available?

Anticonvulsant and Antidepressant drugs are ideal for [neuropathic pain treatment](#). They are the first line of treatment that your doctor will prescribe for your neuropathic pain. If you are prescribed an antidepressant, it does not mean your doctor suspects that you are depressed. Antidepressants help to treat pain even if you are not depressed. Your doctor could also prescribe [non opioid analgesics](#) and non-steroidal anti-inflammatory drugs or NSAIDs.
