

OpenERP 7.0 - Webkit Installation Guide (Ubuntu)

To install webkit you have to download wkhtmltopdf:

<https://code.google.com/p/wkhtmltopdf/downloads/list>

The following files must be installed, you can choose which one you are going to install depending on your arch amd64 or i386.

wkhtmltopdf-0.11.0_rc1-static-amd64.tar.bz2

wkhtmltopdf-0.11.0_rc1-static-i386.tar.bz2

On linux you can download it opening the Terminal (Ctrl+Alt+T) and writing one of the following lines:

```
wget http://wkhtmltopdf.googlecode.com/files/wkhtmltopdf-0.11.0_rc1-static-amd64.tar.bz2
```

```
wget http://wkhtmltopdf.googlecode.com/files/wkhtmltopdf-0.11.0_rc1-static-i386.tar.bz2
```

Then you have to install it, so you have to write this on the terminal:

```
tar xvjf wkhtmltopdf-0.11.0_rc1-static-amd64.tar.bz2
sudo chown root:root wkhtmltopdf-amd64
sudo mv wkhtmltopdf-amd64 /usr/local/bin/wkhtmltopdf
sudo chmod +x /usr/local/bin/wkhtmltopdf
```

On OpenERP report_webkit is going to look for the library path, but sometimes this can't find it. In that case you have to do this:

Go to Settings>Technical>Parameters>System Parameters

And add this:

Key: webkit_path

Value: /usr/local/bin/wkhtmltopdf

That's all.
