Authors Information

No	Author Name	Email

Acknowledgement

Acknowledgements should be collected in a separate section in the Title Page before your article is published. Individuals who assisted with the study should be listed here (e.g., providing language help, writing assistance, or proofreading the article, etc.).

Author Contribution

Each author is expected to make substantial contributions to the design or design of the work; or to the acquisition, analysis, or interpretation of the data; or to the creation of new software used in the work; or to the drafting or substantive revision of the work; and to the approval of the version submitted (and the version substantially modified by the staff of the journal, which includes the contribution of the author to the work).

For each article with several authors, a short paragraph specifying their individual contributions must be provided in the Title Page. The following statements should be used "Conceptualization, X.X. and Y.Y.; Methodology, X.X.; Software, X.X.; Validation, X.X., Y.Y. and Z.Z.; Formal Analysis, X.X.; Investigation, X.X.; Resources, X.X.; Data Curation, X.X.; Writing – Original Draft Preparation, X.X.; Writing – Review & Editing, X.X.; Visualization, X.X.; Supervision, X.X.; Project Administration, X.X.; and Funding Acquisition, Y.Y.". Please turn to the CRediT taxonomy (<https://casrai.org/CRediT/>) for an explanation of the term and background of the CRediT.

Funding

Please add: "This research received no external funding" **OR** "THE NAME OF FUNDER funded this research, grant number XXX" **OR** "XXX funded the APC." Check carefully that the details are accurate, including the use of the standard spelling of funding agency names and the formal grant number.

Ethical Clearance Number

In this section, the author should add the Institutional Review Board Statement and its approval number if relevant to the study. The author might exclude this statement if the study did not require ethical clearance. Please add, "The study was conducted in accordance with the NAME OF LAW and approved by the Institutional Review Board (or Ethics Committee) of NAME OF INSTITUTE (protocol code XXX and date of approval)." **OR** "Ethical review and approval were waived for this study due to REASON (please provide a detailed justification)." **OR** "Not applicable" for studies not involving humans or animals or not concerning public health and safety.

Informed Consent Statement

Any research article describing a study involving humans should contain this statement. Please add, "Informed consent was obtained from all subjects involved in the study." **OR** "Informed consent was waived due to REASON (please provide a detailed justification)." **OR** "Not applicable." for studies not involving humans (author might also exclude this statement if the study did not involve humans). Written informed consent for publication must be obtained from research participants who can be identified (including by the participant themselves). Please state, "Written informed consent has been obtained from the participant(s) to publish this paper," if applicable.

Data Availability Statement

We encourage all authors of articles published in this journal to share their research data. This section provides details regarding where data supporting reported results can be found, including links to publicly archived datasets analyzed or generated during the study. A statement is still required when no new data is created or unavailable due to privacy or ethical restrictions.

Conflicts of Interest

Declare conflicts of interest or state, “The authors declare no conflict of interest.” Authors must identify and declare any personal circumstances or interests that may be perceived as inappropriately influencing the representation or interpretation of reported research results. Any role of the funders in the design of the study; in the collection, analysis, or interpretation of data; in the writing of the manuscript; or in the decision to publish the results must be declared in this section. If there is no role, please state, “The funders had no role in the design of the study; in the collection, analyses, or interpretation of data; in the writing of the manuscript; or in the decision to publish the results”

Declaration of Generative AI Use.

Authors must disclose any use of AI tools in the acknowledgments section, specifying the tool used, its purpose, and confirming their full responsibility for the final content. The declaration should be written as follows: “During the preparation of this work, the author(s) used [tool name] to assist in [specific function]. After using this tool, the author(s) reviewed and edited the content as needed and took full responsibility for the content of the publication.” For example: “During the preparation of this work, the author(s) used Grammarly to assist in improving grammar, clarity, and academic tone of the manuscript. After using this tool, the author(s) reviewed and edited the content as needed and took full responsibility for the content of the publication.”

PUT
**THE TITLE OF PAPER HERE, IN CAPITAL LETTER (UPPERCASE) WITHOUT LINE
SEPARATION**

Abstract

- Abstract with no more than 300 words should be supplied to reflect the content of the paper. A concise and factual abstract is required. **Background.** Provide context or background for the study and state the study's primary objective or hypothesis in 1–6 sentences. Also, u please explain the previous research/program what other people do or what you have done before. The author includes a hypothesis (if any) which explains the tentative result. **Methods.** Describe the basic procedures used during the study, including selection of study subjects, observational, analytical rrr analysis and analysis methods, and define the primary outcomes. **Results and discussions.** Summarize the main findings, including specific effect sizes and their tb significance, if possible. Include (if relevant) the number of participants in each group, the primary outcome for each group, and any significant adverse events or side effects. Also, please explain the relation between your theory and your resultht in your article. **Conclusion.** In 1–2 sentences, state the principal conclusions, emphasizing new and important aspects of the study or observations in aspects of your research. An abstract is often presented separately from the article, so it must be stand-alone. For this reason, references should be avoided. Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself.

Keywords: Alphabetically sorted; Maximum 6 keywords; Separated by semicolon (;) and written in Sentence case

Before we begin, we will inform you about the journal. The Journal of Environmental Science and Sustainable Development has 4 types of manuscripts that authors should follow, such as Original Research article and Review article.

Original Research article (5000 to 10000 words, excluding references). A full length original empirical research, mainly following this order: introduction, methods, results and discussion, conclusions, and references, an accurate description of research and an objective and comprehensive discussion of the results are highly encouraged.

Review article (6000 to 11000 words, excluding references). A comprehensive and critical literature review (includes organizing, integrating, and evaluating) of the latest published research, meta-analysis and systematic reviews are highly encouraged.

1. Introduction

Provide an adequate background, context of the problems based on the literature review. State the objectives of the work and emphasize the originality (state of the art). The first paragraph of a section or subsection should not be indented; subsequent paragraphs should be indented like the following paragraph. In the end of this section, please also briefly state the structure of the paper, starting from Title up to References. Please follow this citation style: Citation should be in

following style: (Julio, 2018), (Ahmed & Saleh, 2017), (Gretz et al., 2017), (Fowler et al., 2018a; Fowler et al., 2018b), (Joe et al., 2014; Dexler, 2016; Adams, 2018).

There is no theoretical background section in this manuscript. But you must input your theoretical background on the Introduction section. Theoretical background contains previous theories as the basis of research and the temporary hypothesis. The theory can be in the form of scientific articles, articles in journals, textbooks, or other sources of scientific writing. This theory will be used to provide **state of the art** of your manuscript from research problems that have been proposed. After the theories are mentioned and discussed, you need to form a problem that shows **why this manuscript is important, existing gaps, previous research** and you as an Author must write **the purpose of the manuscript**.

Introduction text - Introduction text - Introduction text - Introduction text - Introduction text.

2. Methods

Provide sufficient detail methods to allow the work to be reproduced. Methods already published should be indicated by a reference: only relevant modifications should be described. Methods are the means used by the author to answer the existing research problem. The method must be clear with the location and time of the research, the population and sample of the research, the research variables and the research data. Describe the basic procedures used during the study, including selection of study subjects and observational and analytical methods

3. Results and Discussions

Results and discussion contain results obtained by the author during the research. The results of the research submitted in advance as a whole, which continues by doing the process of discussion. Result and discussion of your manuscript also interconnected with your theory that was used. The discussion is presented systematically from **general, then leads to the specific**. Presentation of the research can be done with the help of tables, drawings/graphs, maps/plans, and schemes. **Minimum of your explanation on this chapter is range 40% to 50% of your manuscript**

Results should be clear and concise. Results should be clear and concise Results should be clear and concise. Results should be clear and concise. Discussion must explore the significance of the results of the work. Adequate discussion or comparison of the current results to the previous similar published articles is recommended to show the positioning of the present research (if available).

The figure number and caption should be typed below the illustration in 10 pt and centered. If the figures get on other sources, write the name of the source below the figures, left justified. The figures on your manuscript must be sent separately from your manuscript with high resolution. Below is an example which the authors may find useful.

And an entry	1	2
And another entry	3	4
And another entry	5	6

(Source: An Example of Source. Year of Source)

[illegible]

Formulae should be numbered consecutively throughout the manuscript as Equation 1. In cases where the derivation of formulae has been abbreviated, it is of great help to the reviewers if the full derivation can be presented on a separate sheet (not to be published). Formulae should be centred and numbered.

$$\rho = \frac{E^{\frac{\varpi}{\alpha}}}{J_c(T = \text{const.}) \cdot \left(P \cdot \left(\frac{E}{E_c} \right)^m + (1 - P) \right)} \quad (1)$$

The main conclusion of the study may be presented in a short conclusions section, which may be stand-alone. It should not repeat the results, instead provide significant findings and contribution of the study. To close this section, state some important limitations of research, followed by potential future research regarding the issue. This conclusion is **maximum 4 paragraph**
