

★★★★★ **The best tool on the market**

24/06/24 by Intranduan

Wanna create a fantastic world without getting a headache? This tool is for you, I'm blown away with how amazing this product is! I have only scratch the surface of this, and I'm so happy.

The amount of stuff I can do is so cool, put a river down done, put a road down? done, change the entire world in a few clicks? done. Best product for sure.

★★★★★ **Just pure awesome**

30/01/24 by Gibbon

I created parts of my landscapes in Gaea, created PCGs for my environments. Created automaterial to be applied to landscape and all around. But then came the time to plug it all together which ended being really hard thing to do with lots of tedious manual work.

This amazing plugin by default lets you create amazing terrains as is. But it is totally customizable. You can import your terrain maps as stamps and use them to create the world you dreamt of. It allows to apply the stamps to terrain non-destructively, you can move the stamps around as you see fit. You can use provided PCG graphs or create your own and apply them to the terrain to get procedural biomes.

Documentation is solid and helps you get it all running in minutes. Also the creator is active on Discord and very helpful with any question you might have.

I can't really express how much I love this. It is worth every penny and saved me days (of not weeks) of development. This was exactly what I needed.

12/10 would buy again.

★★★★★ **amazing features amazing simplicity amazing support**

06/02/24 by McbtvSJKEQI

Wow, this tool's simplicity is the real deal. Wow, this developer's support is the real deal, and wow, the level of features on this initial release is the real deal!!!

I am stunned at what this is right now working out of the box and it's just the start? The developer is sharing on Discord of what he is adding in the next few months. Oh boy, it's gonna be. And ride. Assets like this is what makes the epic market place so amazing and unique.

This is an asset you ask why has Epic not done this? They have a huge bucket of Fortnite money and it takes a solo indie developer to come out with something so game-changing as a massive world, and he is just getting started?

This developer is very sharp and focuses and pulled this off in a few months? Amazing.

And to top it off, the support is amazing on Discord, and everything is open and available for review. All the docs, the video tutorials, and the developer answers questions immediately.

The 1-star reviewer needs to get a clue if everything is available to read and review so your due diligence!

Folks get it now because it is worth 3x the price, and with the new stuff being planned, this is gonna be like narrative and gonna go up and up and up in price because it's that good.

★★★★★ **Game-Changing Plugin: A Developer's Dream Come True**

24/01/24 by lo_ol the one

I recently had the pleasure of using this outstanding plugin, and I must say, it exceeded my expectations in every way. The meticulous craftsmanship is evident from the moment you start working with it, and the accompanying documentation is not only comprehensive but also incredibly user-friendly.

The results achieved with this plugin are nothing short of impressive. It's a true game-changer, significantly reducing development time and allowing me to channel my energy into more creative aspects of game development. The efficiency it brings to the table is truly remarkable.

Hats off to the developer who undertook this monumental task single-handedly. Their dedication and skill shine through, and they deserve sincere gratitude for delivering such a high-quality product.

As I navigate through the intricacies of game development, I find myself inspired by the potential this plugin unlocks. While none of us can predict the future, one thing is for sure – I am committed to supporting this developer and their future endeavors. It's a small way of expressing gratitude for the tremendous value they've added to my workflow.

In conclusion, I wholeheartedly and without reservation recommend this product to anyone in the game development community. It's a tool that not only simplifies but elevates the development process. Kudos to the developer for creating something truly exceptional!

★★★★★ **A Must-Have Tool with Exceptional Support.**

24/01/24 by corvinus20

I highly recommend acquiring this tool, given its ability to efficiently optimize months of work. Its focus on rapid creation of massive environments is invaluable. Furthermore, I highlight the excellent support and willingness of the creator to provide assistance, which adds significant value to the overall experience.

The future updates proposed by the creator are highly promising, adding even more potential to this already essential tool. Although I rarely take the time to write reviews, on this occasion, it is imperative to make an exception to highlight the remarkable qualities of this product and encourage more people to take advantage of its benefits, as I have done.

★★★★★ **Great PCG tool**

06/02/24 by ArtistSage

First off the dev is very active on Discord so that is a huge plus for me. The tool works as intended and provides a good base to start using PCG. Before buying any PCG tool you should have a grasp on the basics as no matter what you will need to plug in your own assets to generate.

Dev is actively building out the tool to do more so I would definetly rec buying and supporting him now before the prices go higher as it will justify the increase the more features he adds.

★★★★★ **Amazing tool!**

18/01/24 by NiceShadowDev

This asset is not only saving you a lot of time to create big worlds, it's also very fun to use.

I can highly recommend it and it's aboluetyly worth the price considering that there was already an update and there are more updates planned! And it's nice to see that a developer is making use of the latest unreal engine features, can't wait what we'll see with unreal 5.4 ^^.

The documentation is clean and I was able to implement it in my project very quick!

★★★★★ **Top Tool and Support**

02/01/24 by Stormskull

I'll make it short for all those who have little time. The best PCG tool on the Marketplace with an author who cares about the community and is always available.

★★★★★ **Great tool with awesome support!**

31/12/23 by Twigz94

From the moment I integrated the plugin into my project, I was blown away by its capabilities. It seamlessly enhances the workflow, providing a range of features that significantly boost efficiency and add depth to my workflow. The documentation provided is clear and comprehensive, making the integration process smooth and hassle-free.

What truly sets this plugin apart, however, is the exceptional support provided by the author. Anytime I encountered a challenge or had a question, the response from the developer was not only prompt but also incredibly helpful. The author's dedication to assisting users is commendable and ensures a positive experience throughout.

★★★★★ **Must have tool for any development**

12/01/24 by neojac

Best world building system I have worked with. Rapidly create any type of world with your own assets using this system. Author is extreemly responsive who cares about the community and is always available. We are already converting all our released games to use this system.

★★★★★ **An outstanding framework and set of tools for building the largest Unreal Engine worlds**

08/10/24 by lnxThOn

This is exactly what you need today, to build effective, dynamic and editable worlds in Unreal Engine 5.4 with all of the most modern tools. Let me be even clearer. By purchasing this asset, you will be supercharging the delivery of your game for the following reasons:

- 1) Scriptable tools that give structure to PCG implementation in your levels and outperform manual process
- 2) A common sense and AAA* implementation of new engine technology that enables you to integrate your own learning into a well designed framework supported by front end tools. (You can link your own existing PCG graphs in and utilise the parameters of the framework to drive them instead)
- 3) Top class community

So stop messing around, building your own tools, wasting your time, when you could move forward in leaps and bounds.

★★★★★ **Absolutely worth every penny**

08/02/24 by Posh Indie

Making a massive world (Pun intended) is hard and time consuming. What this asset provides is a much easier path for any size team to achieve amazing results. By default, Massive World includes everything you need to create large game worlds, but it also lets you extend its feature set (Custom stamps, your own assets, etc). Obviously, I would recommend taking advantage of this ability to customize the systems. Everything is non-destructive, which makes modifying the worlds completely painless.

With the latest update, Biomes are pretty much automatic and it is fantastic. No more fighting with material blending to make it look "just right". Draw your biome, let Massive World do the rest.

Land mass? Biomes? Lakes? Rivers? Spawning? Things I forgot to mention? Massive World has you covered.

The developer is incredibly kind and helpful. Support is top notch.

If I had to give advice to newcomers it would be:

1. Join the Discord.
2. Read the Documentation.

I am happy with this purchase, and I am confident that anyone considering Massive World for their large world project will be as well.

Seriously: When just starting out, the documentation probably answers all your questions. Keep that in mind!

★★★★★ **for someone new to pcg**

03/02/24 by Perry5216

For me im new to the whole pcg side of things, it feel like magic.

The discord the dev is active and has aswsered my questions. overall happy with the purchase!

★★★★★ **Great Tool like cheating**

06/02/24 by Jose Gabriel

This tool should be on the engine by default, flexible, powerful and easy.

In one hour I was already making stuff with my own assets.

well organized by using data tables.

★★★★★ **So much possibility**

30/01/24 by crowsinger23

This is quite a helpful asset for working on a landscape. It handles generation, stamps, biomes, lakes and rivers, all in a nondestructive way. The developer is very helpful on discord, and seems eager to keep working on this and adding features as UE develops. I had a lot planned today, but I've spent most of the day playing with Massive World and new level.

★★★★★ **Great Tool**

31/01/24 by eric_yeh

Very happy with the results produced by the terrain generator.

★★★★★ **Incredible tool & completely recommended!**

31/08/24 by Apocalypse69

I've always wanted to be able to craft big worlds by myself, and a few days after purchasing this tool I decided to review it, because the usage, the documentation and the constant 24/7 support from the developer in discord (I still did not ask questions yet, as I love to search for the info before asking) are amazing, because you can always ask and even if he is not present, the community will help you a lot.

If you need an amazing tool that will help you to craft big worlds with just a few clicks, for any kind of game, just purchase it, because this is an incredible user friendly plugin. 11/10!

★★★★★ **Great Asset, Better Developer**

08/06/24 by NinjaSamar

Every asset on the marketplace is only as good as the dev behind it. And Michael | Qwerty is one of the best I've ever had the pleasure of working with. He apparently doesn't need to sleep as he is pretty much always on discord chatting with the community. If you're a beginner looking to get some experience with PCG and want to have a community to help you learn the ropes, Massive World is a must purchase. For intermediate and expert devs, I'm positive you'll find value in this asset as well.

We've all seen those assets that we thought looked good, but didn't buy, and then you find out 3 months later the price doubled. Massive World & Massive Village will be one of those assets, so don't wait too long to pick it up.

★★★★★ **Quick and easy!**

10/06/24 by wha092686

This product took me less than 5 minutes to set up and the results are exactly as advertised in the screenshots. The documentation is also very concise.

While setting it up, I only ran into one issue (with virtual textures), but the plugin creator helped me out immediately after I asked my question in the discord!

★★★★★ **Incredible Pack!!!!**

08/05/24 by UnrealWavyWorld

Great pack, couldn't ask for more. The developer is amazing answered all my questions (Even those in the docs haha), none the less would highly recommend!

★★★★★ **Great asset and Great support from the creator**

18/04/24 by PhantomX

Qwerty always responds to any questions you may have as soon as he can.

This asset really helps with speeding up the designing of levels and prototyping different terrains thanks to the quick use of the many stamps available by default with this asset let alone the ability to add your own.

Definitely recommend to anyone trying to speed up their level design.

★★★★★ **Quite enjoying the asset so far**

18/03/24 by Linuxwiz

Discord validation : Linuxwiz

I quite enjoying the product so far, finally a good asset using PCG. Thanks for this!

★★★★★ **It works and dev is very responsive and very actively adding features.**

06/02/24 by XavierLMagnus

What more do you need to know?

★★★★★ **I recommend :)**

14/03/24 by psmyla

A cool and useful tool for creating terrain. Thanks!

★★★★★ **Easy to use, Active support!**

26/02/24 by Dice160

Handy and great tool. Thank you!

★★★★★ **Just buy it, Timesaver at its best and noob friendly**

13/02/24 by th3clerc71

I am new to the unreal design, blue prints etc. This asset is a must for anyone new and experienced who wants to create landscapes quick and easily. I downloaded, followed the excellent documentation and basic youtube videos, visited discord to read up on things there. I had a world up and running with trees, rocks etc within 10 - 15 mins (me being a noob) using the supplied stylized material etc. Not tried messing around with rivers or roads but will do next couple of days.

I am now going to learn how to add other assets (trees, grass etc) to database and how to change materials.

Join the discord and there are so many people who can help, Michael is always active or about within a couple of hours.

Again just buy it.

As people buy it and use it, you can expect a lot more video tutorials to appear, just need a step by step video guide to change the assets and i will be even more happier.
