

## SKYRIM VANILLA PLUS 2025

First of, thank you for waiting! This load order may be a bit different to some but this is currently one of my most stable LO as of right now, a lot of these mods are optional, especially the armor sets, SDA, and towns( i will bracket the mods that are optional for you to have more space and customization), Please download the biggest file size mods first, eg. Fantasia landscapes and skyland architectures. My Modlist is also Ussep free to save space! So here we go:

(A bug thanks to AussieGamer723 for reporting bugs, bugfixes and certain quirks with this load order)

Bug 1. CURRENT BUG FOUND BY AussieGamer723: Detect Life spell is wonky and causes beams of light when used at certain areas

Solution: Delete ELFX exteriors or if you want to keep ELFX EXTERIORS, use the ability Called Instincts in the Power tab which has the same effect of detect life.

Bug 1.2. VANILLA HAIR WIP causes issues with Mannaz integrated if you are using a nord character

Solution: If you want to keep the Hair mod with Mannaz, Load Mannaz after the Vanilla Hair wip

(VERY OPTIONAL AS IT IS A BIT BUGGY ALT START MOD)

- Alternate perspective ( a bit buggy when the ulfric cart plays out, if you want to keep this, please save right before you go out of the tavern, once the cart scene starts, the imperial should go near the inn to park his horse, that's when you know that the scene will play out correctly, or you could bypass the buginess by simply talking to the dragon)
- Alternate perspective mbe 2.0 and xp32 patch
- Alternate perspective rs children overhaul patch

After installing everything above, Open spells menu and inventory to tweak stuff. For the people who downloaded sensible interface, to open the inventory press rb+x , magic is rb + b, map is rb + a and favourites is rb+ y

Free space when not installing optional mods is over 1gb! So you could use this LO as a base and you could customize your skyrim all you want to your liking!

It is recommended to turn off Nat fx settings by opening nat using your alteration magic and pressing the graphics option, but it depends on you if you want to keep some certain features

on. As for my game, it is purely vanilla NAT with fx turned off except for the interiors, I didn't tweak any settings or added color filters.

I am still a learning modder and if you recommend anything to me, I will gladly listen. As for now, I am very Happy with my load order but will still take criticism if it is not to your liking. Thank you so much! Please send me a screenshot if you used this LO. TSM
