

DesignPLUS Legacy Content

Users can upgrade legacy DesignPLUS content so that it works with the new DesignPLUS sidebar. Upgrading will enable all the powerful new features, streamlined workflow, and flexible content included in the new DesignPLUS Sidebar.

Upgrading Legacy Design Tools Content

1. Edit the page and launch the new DesignPLUS Sidebar.
2. Find the upgrade notice at the bottom of the sidebar and click “Go to Upgrade Tool.”
3. Review the legacy content identified by the Upgrade Tool scan.
4. To upgrade content, you may:
 - a. Click “Upgrade All Items” to perform a bulk upgrade for the whole page, or
 - b. Open the content expanders to perform targeted upgrades.
5. The upgraded content is now compatible with the new DesignPLUS Sidebar.

How it Works

The Upgrade tool identifies and transforms the HTML ids, classes, and structures from legacy “kl_” code to new “dp-” code. The “dp-” HTML code is identified in the new Sidebar, which is much more flexible and efficient for all users.

Frequently Asked Questions

Continuity

Without any action, legacy content will still be displayed normally in the live view.

Compatibility

You must upgrade legacy content to edit it with the new Sidebar.

Reciprocity

The legacy Design Tools sidebar cannot be used to edit upgraded content.

Parity

The new DesignPLUS Sidebar has complete feature parity with legacy Design Tools.

Simultaneity

Both old and new content can exist simultaneously in the same course.
