

## Proposed agenda & Notes

- General updates:
  - Kris: Core issues that affect us
    - Quick Edit doesn't work for Custom Blocks referenced by other Custom Blocks (mortenson)
      - <https://www.drupal.org/node/2661880>
      - <https://www.drupal.org/node/2690275>
      - Related core issue where this was solved for Views:
        - <https://www.drupal.org/node/2690275>
      - “Yeah if we just need to define a custom render callback that's way easier than what I was planning (custom View mode/renderer for CTools Block)”
  - Kris: Status update on [page\\_manager](#)?
    - Moving support request to page\_manager queue:  
<https://www.drupal.org/node/2678038>
  - Frega / David / aspilicious: Status update on [layout\\_plugin](#)?
    - Nothing new this week
  - Jakob / mortenson / DyanneNova / yanniboi: Status update on Panels / IPE port?
    - Jakob: out last week, no updates. “and this week not sure I'll have much time to work on D8 panels, it might be mostly D7 related stuff”
    - Mortenson: “I'm working on <https://www.drupal.org/node/2713257>, which is going really well. Also learned about test\_dependencies, so I should be set on that issue without discussing it today”
  - andrewbelcher: Status update on mini-Panels?
    - Not present at time of meeting
  - David: Status updates on Panelizer?
    - EclipseGC:
      - “so I have defaults coming along. I added naming/machine\_naming of defaults so that we can have multiple. it's broken and you have to know how to make it not broken, but that's next on the list. then I'll be adding UI elements to actually add multiple but the plumbing is largely there.”
      - “also worth noting, the panelizer version of the “content” page no longer uses a custom tempstore, I don't know if I had that working this time last week but I do now”
  - Kris / Jakob: Status update on CTools?
    - EclipseGC:
      - “Pushed an update to the base class for block display variant stuff that is basically JUST the \_\_sleep work we did in PM”
      - “that will remove the need for that code both in PM and everywhere else”

- Discussion topics for this week (switch to hangouts?):
  - Nothing this week

## Participants

- japerry
- mortenson
- dsnopek
- DyanneNova
- EclipseGC

## Log

12:00 PM <dsnopek> Hi Everyone!

12:00 PM <dsnopek> Here's the notes/agenda for the meeting:

<https://docs.google.com/document/d/1YqI2teRQbYMIImUG7HTuZRgi2RJeqUm2M2lcQhmmWml0/edit?usp=sharing>

12:00 PM <dsnopek> Who all is here for the meeting?

12:01 PM <japerry> gmorning

12:01 PM ⇐ DyanneNova quit (~DyanneNov@50.240.26.14) Quit: DyanneNova

12:01 PM <dsnopek> japerry: Hey!

12:01 PM <dsnopek> mortenson: EclipseGc: meeting?

12:02 PM <mortenson> dsnopek: yep!

12:04 PM → DyanneNova joined (~DyanneNov@50.240.26.14)

12:04 PM <dsnopek> I'll give it 1 more minute to see if anyone else shows up! We can't cover a ton of ground, just us 3..

12:05 PM <DyanneNova> gmorning

12:05 PM <dsnopek> DyanneNova: g'afternoon! :-)

12:06 PM <dsnopek> Alright, let's get this meeting started!

12:06 PM <dsnopek> Anyone aware of any core issues that affect us?

12:07 PM <mortenson> I'm working on <https://www.drupal.org/node/2661880> and <https://www.drupal.org/node/2690275>

12:07 PM <Druplicon> <https://www.drupal.org/node/2661880> => Quick Edit doesn't work for Custom Blocks referenced by other Custom Blocks [#2661880] => 12 comments, 3 IRC mentions

12:07 PM <Druplicon> <https://www.drupal.org/node/2690275> => CTools Block's "entity\_field" Block is incompatible with Quick Edit, because it is a custom render pipeline [#2690275] => 15 comments, 5 IRC mentions

12:07 PM <mortenson> The latter is a CTools issue but is specifically tied to Quickedit

12:08 PM <mortenson> #2661880 affects us as it's related to broader Quickedit issues that affect common Panels setups.

12:08 PM <dsnopek> Wow, that issue has some interesting comments

12:08 PM <mortenson> Basically trying to get Quickedit to play nice with complicated Block Content/Panels IPE sites

12:10 PM <dsnopek> Yeah... Personally, I don't intend to use Quickedit (I'll probably go for something like FAPE) but it's interesting how tied to core's idea of view modes it is

12:10 PM <dsnopek> But it sounds like this was solved for Views in <https://www.drupal.org/node/2083387>?

12:10 PM <Druplicon> <https://www.drupal.org/node/2083387> => Make it possible to use in-place editing on entities rendered by a custom render pipeline (e.g. Views) [#2083387] => 29 comments, 1 IRC mention

12:11 PM <mortenson> Yeah if we just need to define a custom render callback that's way easier than what I was planning (custom View mode/renderer for CTools Block)

12:12 PM <dsnopek> mortenson: Ok, cool! I'm glad there's a way forward :-)

12:12 PM <dsnopek> Is that all for core?

12:12 PM <dsnopek> (I hope so :-))

12:12 PM <mortenson> That's all from me

12:13 PM <dsnopek> Ok, let's take a chance and move on!

12:13 PM ⇐ saphyel quit (~saphyel@62.6.159.62) Remote host closed the connection

12:13 PM <dsnopek> Anyone have page\_manager updates?

12:13 PM <dsnopek> The crew I understood to be working on p\_m isn't around :-/

12:13 PM <mortenson> I was going to ask if <https://www.drupal.org/node/2678038> is a Page Manager issue

12:13 PM <Druplicon> <https://www.drupal.org/node/2678038> => Node view [#2678038] => 6 comments, 1 IRC mention

12:13 PM <mortenson> Not sure why it's in the Panels queue

12:14 PM <mortenson> "Is it possible to apply the default node\_view /node/{node} to certain node types?" afaik that has nothing to do with Panels

12:14 PM <dsnopek> mortenson: Yeah, that totally sounds like a p\_m issue

12:14 PM <dsnopek> mortenson: That path is for a page\_manager page

12:14 PM <mortenson> dsnopek: Cool, I'll move it

12:14 PM <EclipseGc> dsnopek: sorry, I'm around now

12:14 PM <dsnopek> EclipseGc: Hey!

12:15 PM <dsnopek> EclipseGc: No worries :-) Anything to add on core or page\_manager?

12:15 PM <EclipseGc> Storms coming and I had to clear the new garage to get the car in

12:15 PM <EclipseGc> :-)

12:18 PM ⇐ StryKaizer quit (~textual@d54C492F5.access.telenet.be) Read error: Connection reset by peer

12:19 PM <dsnopek> Ok, I'll take that as nothing to add

12:19 PM <dsnopek> On layout\_plugin: there's nothing new from me!

12:19 PM <dsnopek> On to Panels status updates!

12:19 PM <dsnopek> japerry already put his in the doc - he was out

12:19 PM <japerry> aye aye

12:19 PM <dsnopek> mortenson: DyanneNova: Panels / IPE status updates?

12:20 PM <japerry> yup, not much. and this week not sure I'll have much time to work on D8 panels, it might be mostly D7 related stuff

12:20 PM <mortenson> dsnopek: I'm working on <https://www.drupal.org/node/2713257>, which is going really well. Also learned about test\_dependencies, so I should be set on that issue without discussing it today.

12:20 PM <Druplicon> <https://www.drupal.org/node/2713257> => Create Javascript test coverage for Panels IPE integrations with Panelizer and Page Manager [#2713257] => 4 comments, 1 IRC mention

12:22 PM <dsnopek> japerry: mortenson: Awesome, thanks!

12:22 PM <mortenson> The only thing I don't think we'll have test coverage for off the bat is drag+drop (hard to emulate in a headless browser), but I haven't run into any other problems so far.

12:23 PM <dsnopek> mortenson: Yeah, I wouldn't worry about the drag and drop right away (or maybe ever)

12:23 PM <dsnopek> mortenson: There's probably not a hugely important ROI on testing drag & drop - we're using standard code to do it, and people will probably notice right away if we break that ;-)

12:24 PM <dsnopek> Anyone have any status updates for Panelizer? I don't have anything from my end...

12:24 PM <dsnopek> EclipseGc: ^^?

12:24 PM <EclipseGc> yeah

12:25 PM <EclipseGc> so I have defaults coming along

12:25 PM <EclipseGc> I added naming/machine\_naming of defaults so that we can have multiple

12:25 PM <EclipseGc> it's broken and you have to know how to make it not broken, but that's next on the list

12:25 PM <EclipseGc> then I'll be adding UI elements to actually add multiple

12:25 PM <EclipseGc> but the plumbing is largely there.

12:26 PM <EclipseGc> also worth noting, the panelizer version of the "content" page no longer uses a custom tempstore, I don't know if I had that working this time last week but I do now

12:28 PM <dsnopek> EclipseGc: Cool, thanks!

12:28 PM <dsnopek> So, last up ... Ctools status updates!

12:28 PM <dsnopek> EclipseGc: ^

12:29 PM <EclipseGc> erm, pushed an update to the base class for block display variant stuff that is basically JUST the \_\_sleep work we did in PM

12:29 PM <EclipseGc> that will remove the need for that code both in PM and everywhere else

12:29 PM timplunkett → timplunkettAFK

12:29 PM <EclipseGc> that's the only new thing in CTools

12:29 PM <EclipseGc> and apologies, I was AFK thurs-sun

12:29 PM <EclipseGc> so nothing really got done

12:30 PM <dsnopek> EclipseGc: Cool, thanks!

12:30 PM <dsnopek> So, that's all the status updates

12:30 PM <dsnopek> Does anyone have anything you'd like to discuss?

12:31 PM <mortenson> I'm set!

12:31 PM <EclipseGc> I am too

12:31 PM <dsnopek> Cool! We can call it a quick meeting this week :-)

12:31 PM <EclipseGc> yay

12:31 PM <dsnopek> Thanks Everyone!
