Title of JSEBA Written With Font Segoe UI 12 Pt, Bold Print

Full Name Without Degree[1] and Author[2]
[1]Affiliation
[2]Affiliation
Email: email@gmail.com and email@gmail.com

Abstract
The word Abstract should put in left, bold, 11 point, paragraf space after 0 poin. Abstract should contain summary of the all research (aim, scope, result and conclusion) with maximum 150 words, justified, 11 point, and single spacing. For keywords wrote in italic and then separated using symbol (;) with maximum are 5 words. Abstracts are made in Indonesian and English. This article is a template for writing in JSEBA using MS-Word. Articles do not need to be page numbered. The author can write articles in Indonesian or in English. Many pages do not exceed 20 sheets in A4-one column format. The author must provide affiliates and e-mail addresses after the author's name. Affiliates and e-mail addresses are written using Segoe UI 11pt, space 1. They are writing Titles using Segoe UI 12pt, Bold, All caps. For Articles in B. Indonesia or in English, the author must write the abstract in Indonesian and English. Before writing, please adjust your article margins to the margin of this template by looking at the page setup of the template that we have provided.

KEYWORDS: *Word 1; Word 2; Word 3*

INTODUCTION

Introduction provides adequate background or context (problem and its significance) of the study. The subject should not be written extensively. It is expected that rationale or purpose of the study (gap analysis), the objective in general and specific, and hypothesis (if any) should be expressed clearly. Present a clear "state of the art" of the subject, which discussed literature and theoretical concepts behind it. A concise general background may be included in the article. Present at least 5 (five) recent related works to support the novelty of the research.

METHODOLOGY

Methodology provides sufficient details to allow the work to be reproduced by an independent researcher. Methods that are already published should be summarized and indicated by a reference. If quoting directly from a previously published method, use quotation marks and also cite the source. Any modifications to existing methods should also be described. Indicate the participants observed, including demographic data, number of respondents, the rationale of respondents selection, etc. Describe the design of the experiment, such as the experiment procedures, surveys, interviews, observation characteristics, etc. Write the complete research procedure. Be sure that explanations made in the article will allow other researchers reproduce the work, or make future work out of it.

ISSN 3031-9110

RESULT AND DISCUSSION

Write results in logical sequence. Results with important findings should be present first. When presenting results in a table or figure, do not repeat all those contents in the text. Present only the summary of the text. Describe only new and important aspects of the study. Do not repeat all information from results section or any section above. Present limitations of the study. Write the issues that are new or unsolved, for future research. This section consists of the information on What/How the presented data were produced, no raw data should be present in the article. The produced data are presented in tables, or figures with an explanation of what is the result/findings from the work. The section will also need to address connections between findings and basic concepts or hypothesis made earlier. Authors should also express whether any arguments were needed relating to other works from other researchers. Write implications made by the work related to theoretical or applications.

Table 1: Table Tittle

No	Detail 1	Detail 2	Etc.

Source: Author, Book Title, page or if the data is taken from the results of the analysis, then the author needs to write**: The results of the analysis from the primary data source**

Pictured like the example below:

Vol A, No. B, 2024 Hlm.x-xx
DOI: https://doi.org/10.52620/jseba
ISSN 3031-9110

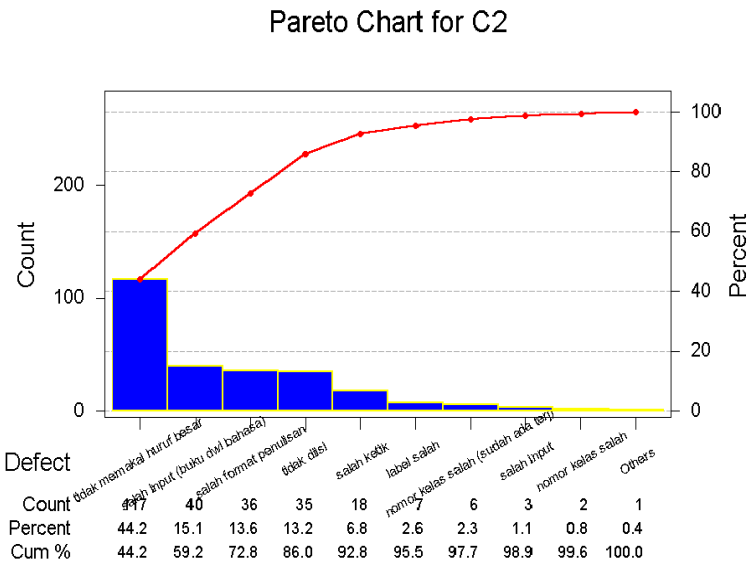

Figure 1. Use uppercase only at the beginning of the image name only without ending the dot

CONCLUSIONS

The conclusion should be linked to the title and objectives of the study. Do not make statements not adequately supported by your findings. Write the improvements made to industrial engineering field or science in general. Do not make further discussions, repeat the abstract, nor only list the results of research results. Do not use bulleted points, use paragraphed sentences instead. maximum 100 word.
