

DEXs

Cetus

CLMM DEX protocol on SUI & APTOS focused on ease of integration. Their native token \$CETUS is used to incentivise participation in their ecosystem e.g through liquidity mining

MC: \$21M

24hr Vol: \$7M

28% of tokens currently in circulation

Turbos

SUI-Native CLMM DEX backed by Jump. Affiliate program with discounts & incentives to encourage KOLs to onboard users. IDO launchpad providing access to market makers, media partners, KOLs & more. Voting rounds to award IDO participants CEX listings for their projects. \$TURBOS is used for governance / voting, staking & trading fee rebates.

MC: \$3M

24hr Vol: \$450k

62% of tokens currently in circulation

KriyaDEX

Project name : KriyaDEX

Short summary: kriya is a DeFi protocol on SUI offering native AMM for swaps, limit orders; strategy vaults and leveraged perpetuals.

Total Money raised: not mentioned.

State: Still tokenless.

TVL: \$8.57M.

Airdrop:

Chakra campaign:

+ It's a campaign launched by the DEX to distribute tokens to their users.

Season one was based on sustained liquidity and swap on kriyaDEX the more you score the more your rewards will be.

- +After season one of their chakra reward program the team airdropped \$1.17M \$KRIYA to more than 50k wallets. This season of the campaign lasted for 7 months.
- + for season 2 it was a 20 days campaign where 200k \$KRIYA were distributed amongst traders only.
- + Season 3 of the campaign will be launched soon with the details so i'm keeping an eye on that.

DeFi

Navi

DeFi protocol allowing lending, flashloans & liquid staking. \$NAVX is used for governance proposals & voting. Recently finished a funding round of 10M \$NAVX to Devs looking to integrate with their ecosystem (31st Aug), it could be worth looking into the projects who were awarded funds.

MC: \$13M
24hr Vol: \$2.9M
20% of tokens currently in circulation

Scallop Lend

P2P money market offering lending/borrowing, flashloans, building tools & a DEX. Backed by SUI Foundation. Their native token \$SCA is used for interoperability & liquidity mining. The protocol itself is very complex & a strong product, I'm not sure about the token though.

MC: \$13.5M
24hr Vol: \$6.6M
20% of supply currently in circulation

Suilend

It is a tokenless lending and borrowing platform on SUI. It is built by the team behind Solend. They have a points system and it looks quite underfarmed. With a few dollars you get to top 11k. You only accumulate points with borrowings.

Aftermath

Some call it JUP of the SUI. It is DEX, lending and staking protocol with integrated Bridge. It is a tokenless protocol without a point system or any hint about airdrop. TVL is 57M so it's quite underfarmed.

Haedal Protocol

Project name: Haedal Protocol.

Short summary: Haedal is a liquid staking protocol built on Sui that allows anyone to stake their SUI tokens to contribute to governance and decentralisation of the Sui blockchain.

Total money raised : not mentioned.

State: still tokenless.

TVL: \$39,58M.

Airdrop: potential.

The only way to interact with the protocol is by staking your SUI in their dapp. By staking your SUI you get haSUI in return.

I believe this is a volume game the more you stake the more allocation you might get when they'll launch their token.

NFT

BlueMove

Blue move is NFT market place on SUI and Aptos. What makes it special is that it has an in-app wallet, Listing rewards, NFT staking, NFT lending, NFT orderbook and Mint Tracking. Their second product is DEX with a swap and lend function. And their third product is Memecoin launchpad (MovePump).

MC: \$4.6M

24hr Vol: \$6.4k

55% of supply currently in circulation
