Title InCommon Expectations: Baseline & Beyond

Abstract

CTAB wishes to engage the audience in a discussion on continuing to further trust and interoperability in Federation: What does it take to be "Federation Ready"?

CTAB will propose several federation-ready expectations - founded on the model of baseline expectations, but with more nuanced evaluation criteria, i.e., adherence is only required when interoperation requires them. Each expectation would have (1) a justification in terms of increased trust, scalability, or interoperability, (2) a technical/operational method of expressing or fulfilling the expectation, and (3) concrete description of one way of configuration to satisfy that expectation.

Intended Audience * ? Please select all that apply

- Network Engineers
- IT Professionals
- Security Professionals
- Trust/Identity Architects
- Researchers/Support
- Cloud Professional

Format: Facilitated Discussion

Targeted Track * Identity & Access Management

Alternate Track Information Security
