

ETH NewYork Hackathon Ideas:

- Arbitrary token <-> token lending (e.g. wrap DAI -> FEI before lending to capture FEI rate)
- New protocol adapter creation (e.g. Interest Protocol integration). Follow the adapter pattern here:
<https://github.com/Swivel-Finance/gost/blob/7bc8dbcd17058a8b4e00967d9ea08cf4f7155a3f/test/adapters/ERC4626Adapter.sol>
- Options Protocol Integration
- Market manipulation analytics / demonstration
(e.g. Rari Pool 8 has 22m FEI, how much FEI borrowed is required to move rates 2%)
- Dune Dashboards
- Yield Donation
-
