

高雄醫學大學103學年度第3學期 期末考試考題釋疑

科目	命題教師	系(所)年級
Block 8	傅伊志老師等	後醫系二年級

考題	原來答案	正確答案	釋疑
5	B	C	the option “C: rheumatoid arthritis” is categorized in the “Seconary causes” but not “risk factors” mentioned in the question.
8	D	B	我覺得B選項是錯的: Core decompression is very effective “before” femoral head collapse才對吧?
8	D	B	Core Decompression (II) • Surgical technique: single core tract or multiple core holes • Long term successful rate (Hungford DS) – Ficat Stage-I 88% – Ficat Stage-II 72% – Ficat Stage-III 26% • Better prognosis – Before collapse – Smaller – Sclerotic rim 24 根據老師上課所講授, Core Decompression手術施行在骨頭塌陷之前(before collapse), 有較好的預後。故(B)選項應為錯誤敘述。
71	B		英文題目為“subacute” stage rehabilitation 中文為”後期“復健
71	B	BD	題目所提的英文描述subacute, 與中文描述後期, 互相矛盾, 故本題答案(B)(D)應都是正確答案。

75	B		transfemoral amputation的hip contracture是 flexion, abduction http://www.ncbi.nlm.nih.gov/pubmed/7554640
75	B	C	根據老師上課所講授，膝上截肢：殘肢容易往前 flexion 、往外 abuction 。故選項C)應是正確答案。
77	A		A選項knight可保護L1~L3 (英文題目) B選項corset可保護L4~L5 (中文題目)
60	B	C	Arthroplasty was uesd in "large" joints
61	B	無答案(應送分)	老師的上課投影片裡，B選項的symptom應該是deformity, loss of function, pain
81	E	A	stenosis may classified as central, lateral recess, and foraminal stenosis、" extra foraminal zone " 故(A)選項，為錯誤選項。
