

Journal 2

8/30

WHAT I DID

- Waited and watched a Steelers logo be developed by lasers.
- Sat and listened to Mr. Cribbs.
- Downloaded the two programs we'll be using.

WHAT I LEARNED

We learned that the class would progressively become more independent as we learned the software over time. We also learned some quick Laser-cutting safety, and how waiting time can vary for laser-cutting projects. Also discovered that we would need to bring a mouse to class, along with our own personal laptops. I need to figure out how to run inkscape on my mac, soon.

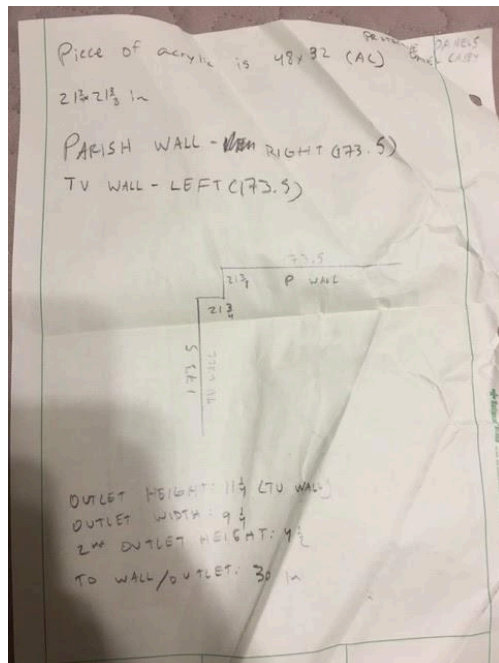

9/1

WHAT I DID

- Continued on from last class at the beginning by downloading more applications.
- Major project of the day was going up to the third floor to take measurements of the walls in the corner of the commons.
- Took notes of our measurements, see attached photo.

WHAT I LEARNED

That the project we'll be undertaking won't be a breeze. The dimensions for the walls were actually quite significant, and should allow for an interesting result once we're finished. I also learned that it's essential to have the apps running on our computers, or else we won't be able to work on projects at home.

(Apologies, the paper became slightly wrinkled.)
