This document will guide you to upgrade your Drupal 8 Scholarly 8.x-5.0.0 installation to Scholarly 8.x-5.1.0 for Drupal 8.

Prepare your workbench

Create a temporary installation of **Drupal 8 Scholarly 8.x-5.1.0** by following the installation instructions. You will use this as a reference to guide you.

Backup

- Backup everything.
- Just in case, make sure you backed up everything =) (besides, it's always a good idea).

Put your website in maintenance mode

- Login to your Drupal installation as administration user
- Navigate to **admin/config/development/maintenance**
- Enable the **"Put site into maintenance mode"** option

- Save your configuration

Update Drupal Core

Take a breath and read the [Drupal 8 update documentation](#). This upgrade will update your Drupal core to the version 8.1.10

- Locate the root folder of your site. This is Drupal's root folder, where the index.php file is located.
- Delete all files and folders except the **[sites]**, **[themes]** and **[modules]** folders.
- Copy all Drupal files and folders from your temporary installation except the **[sites]**, **[themes]** and **[modules]** folders.
- Run the update.php file calling a url like `http://www.example.com/update.php` or `http://www.example.com/test_site/update.php`, if your site is located under a subdirectory.

Patch your Scholarly theme files

1. Locate our theme folder in your temporary installation. Usually at **[themes/custom/scholarly]**
2. Locate our theme folder in your site. Usually at **[themes/custom/scholarly]**
3. Add the following files to your installation using the corresponding source files from the temporary installation
 - `css/components/fields.css`
 - `css/theme/color-gray-orange.css`
 - `css/theme/color-gray-pink.css`
 - `css/theme/color-gray-purple.css`
4. Replace the following files or folders in your installation, using the corresponding source files from the temporary installation (**folders** should be first deleted and then copied from your temp installation).
 - `scholarly.info.yml`

Clear all cached data

This step is important in order to force your template to be informed for the changes you have made in the template files.

To do this navigate to **admin/config/development/performance** and click the “**Clear all caches**” button.

Disable maintenance mode

1. Navigate to **admin/config/development/maintenance**
2. Disable the **“Put site into maintenance mode”** option.
3. Save your configuration.
