

# SMART CYCLE OVERALL GUIDE DOCUMENT- MASTER DOC FOR ALL DIFFERENT TASK /REPORTS WE DO WITH SMART CYCLE

SMART CYCLE IS SOFTWARE THAT LINKS TO PINNACLE  
IT COLLECTS DATA FROM PINNACLE EACH NIGHT AND PRESENTS IT IN MANNER SO WE  
CAN RUN REPORTS  
IT ALSO LINKS TO BID BUDDY

This documents is a master document and it has links to the docs for all the different task  
we doc with smart cycle

## GENERAL GUIDE FOR USING SMART CYCLE SOFTWARE

Smart Cycle software takes a copy of JJ Pinnacle data and Bid Buddy data over night and  
then presents it in a format that users can easily work with  
The key is that it makes it easy to see things that we could also see from pinnacle but  
wouldn't be presented in such an easy to understand format

## ISSUES- IF NEW INTERCHANGE LINE

One issue to be aware of when interpreting data is that if the interchange line is new then  
this interchange line wont have a history of sales,inquiry and no stock data .A further  
complexity is that its not easy to see which interchange lines are new and which arent , this  
simply relies on experience when users sees data that they thinks should have inquiry  
history not having that inquiry history

---

## ISSUES - IF THE INTERCHANGE LINE IS WRONG AND IN FACT ALL DIFFERENT OEM NUMBERS ARE DIFFERENT ITEMS

### [LINK TO VIDEO GUIDE](#)

i.e

interchange notes will say

**### IC IS WRONG - MUST MATCH BY OEM NUMBER ###**

This is complex and should only be done by experienced staff

In this situation when doing pricing or data work we ended to consider only that oem number

i.e

For this interchange there are multiple oem numbers ,

according to IC notes then all items are different cause must match by OEM number

So if we get fresh item in stock with different oem number then we consider it as if we have one in stock only

The absolute complexity is that the search and sales data considers all other oem numbers , thats what makes things super tricky

# SET UP
