PRIVACY POLICY — OrigamiFold
Last updated: [30 - 10 - 2026]
Code Quality Insights ("we") operates OrigamiFold ("the app").
This policy explains what information the app processes and how. The app works without an account, and everything the app itself stores about you stays on your device.

Information the app stores on your device
- Your progress: the models you started or finished, the stars you earned, your favourites, and your Game Mode levels, coins and hints.
- Your settings: chosen language, music and sound.
- Photos of your folded creations, if you choose to take or select them. They stay in the app's private storage and leave your device only when you share them yourself.

We run no accounts and no servers that receive this information. We cannot see it, and it is not transmitted to us.

Camera
The app may ask for the CAMERA permission only when you tap the button to photograph something you folded, or to save a photo to your gallery. The app works fully if you refuse the permission, and you can revoke it at any time in Android settings.

Videos streamed from YouTube
Some guide screens play reference and technique videos inside the app through YouTube's official embedded player. When a player loads or plays, your device connects to YouTube (a Google service). Google may collect your IP address, device information and playback activity under https://policies.google.com/privacy, and may show its own advertising or use cookies or similar storage. We do not receive any of this information.

Advertising and measurement
The app shows advertisements. Before ads are requested, Google's consent screen (User Messaging Platform) asks whether ads may be personalised. When ads load or show, Google (AdMob) and the following certified third-party advertising partners reached through Google's mediation may collect your advertising or device identifier, IP address, approximate location derived from IP address, device information and ad interaction data under their own privacy policies:
AppLovin (applovin.com/privacy), ironSource (unity.com/legal/privacy), Liftoff Monetize (liftoff.io/privacy), Meta Audience Network (facebook.com/privacy), Mintegral (adnfinity.com), Pangle (particlecross.com), Unity Ads (unity.com/legal/privacy).
The app also uses Firebase (Analytics and Remote Config), a Google

service, to measure basic usage: first opens, reaching the home screen, the language you picked, and aggregated ad revenue values. Firebase receives device identifiers and usage events under https://firebase.google.com/support/privacy. We do not receive your identity and do not send your progress, photos or lesson activity to Firebase.
Advertising and measurement are optional: without consent the app does not request personalised ads, and it works fully without them.

Content that never leaves your device
Diagrams, step text, hints and all lesson translations are bundled in the app's APK. No lesson text is sent to a translation or any other service while you use the app.

Feedback email
If you send feedback from Settings, your email app opens with a message addressed to us that includes the app version, the Android version and your device model, so we can fix problems. Nothing is sent until you send the email yourself, and you can delete those lines first.

Backups
If Android's backup is on, Android may include the app's data in your Google account backup and restore it to a new device. Google controls that backup; you can disable it in Android settings.

What the app does not do
- No account, sign-in or registration.
- No purchases in the current released version.
- No crash reporting.
- No personal data is sold or rented.

Children
The app does not ask for names, emails, photos or other personal information, and it does not let users contact each other. Parents should know that the app shows advertisements and that guide videos connect to YouTube: both third parties may collect information as described above.

Deleting your data
The Settings screen offers "Delete my data", which removes your progress, favourites, stars and creation photos. Uninstalling the app, or clearing its storage in Android settings (Apps → OrigamiFold → Storage), removes everything it stored.

Changes and contact

When this policy changes, we update the date at the top and publish the new version here. Questions: maginaflor@gmail.com
