

Akpan, Godwin Michael

UI/UX DESIGNER

I am a UI/UX designer that thrives on delivering creative solutions for solving user problems. I design experiences and products that people love and trust. I help companies design their UX/UI strategy and lead creative teams to build a strong foundation for long-term product success. I'm a visual UI designer that works hands-on when it makes sense to do so. My process entails collaborating cross-functionally with the engineering, product management teams, and all stakeholders to iteratively take products from the ideation stage to implementation.

WORK EXPERIENCE

User Interface Designer / Cloudax.io

JUNE 2022 - DECEMBER 2022 / Contract, remote

Cloudax.io is a crypto investment app that enables users do more with their cryptocurrencies right from the app. I worked on a new design system for onboarding first time users of the app, wireframes and new screens for the save, send, and deposit features.

User Experience Designer / TruthX App

FEBRUARY 2021 - JUNE 2021 / Contract, remote

These are the milestones i achieved while working on the app:

- A well-structured Information architecture (IA) that improves the user's navigation and ease of performing transactions.
- An improved user flow that breaks complex steps to simple steps, reducing the time it takes a user to perform a trade and complete a task.
- A new interface that's user-friendly, playful, and strongly resonates with their branding language and identity.

User Interface Designer / LearnHub Web

JUNE 2020 - AUGUST 2020 / Contract, remote

I conducted user research for the product, created high-fidelity designs, information architecture, and wireframes to aid usability testing. The full case study detailing my user research and design process to high fidelity design is available on my behance.
