REPORT

DEPARTMENT OF ZOOLOGY

FIELD TRIP TO KOLLERU LAKE (ATAPAKA) ON 17-11-2021

Department of Zoology organized the field trip to Kolleru Lake as part of our academic curriculum. In this field trip we visited a wild life bird's sanctuary and it is one of the biggest fresh water lakes. We gained tremendous experience and good knowledge regarding the bird migration and fish population in the Kolleru Lake. In this field trip 70 Students and 3- Teaching staff participated. Students show great enthusiasm to know the real situation in Kolleru Lake.

Kolleru is the largest natural, fresh water lake located between West Godavari and Krishna District in Andhra Pradesh deltas of east-coast of India. The lake is fed directly by water from the seasonal Budameru and Thammileru streams, and is linked to the Krishna and Godavari Barrage systems by over 68 in-flowing drains and channels. Lake is rich in biodiversity and support livelihoods of large native population.

The lake is home to more than 200 different species birds and more than 100 fishes of fish making it a famous wild life tourist destination. It is famous for breeding colonies of spot bill or gray pelican. Large congregations of these birds can be seen during the breeding season.

In this sanctuary several birds were seen those are migrated from different places of the world. Which are Pelicans, Wood Snipe, Tufted Duck, Rosy Starling, Pied Avocet, Northern Pintail, Northern Shoveler, Pochards, Wagtails, Whistling duck, Black - winged Stilt, Common Coot, Purple, Swamphen, Brown Crake, Spot-billed Duck, Cotton Pygmy- goose, Purple Heron, Indian Cormorant, Little Grebe, Pin-tailed snipe, Flamingoes.

Field trip photos and feed back from students here with enclosed.

FEED BACK

Field trip on 17th october Our class members with zoology department lecturers goes to kolluru for see the migrated birds came from australia. And our class friends are enjoyed a lot in kolluru. And we see the museum of migrated birds. In the museum the migrated birds sounds are singing. And first of all we reached the kolluru and we take the group photo after that we observe fresh water lake at the entrance of kolluru. And some trees are present in the middle of the lake. we observe some beautiful migrated birds are brooding in between the trees. And they are catching the fishes living in the lake. And we are going into lake on small and beautiful boat by batches by batches and we observe in the middle of the lake some "ciberian" birds are sit on the eggs those birds. that is so beautiful view from boat.

Thanking you

Feed Back on Field Trip to Kolleru

On 17th October our class members along with the Zoology department went to the Kolleru lake on the basis of field trip. There we first examine the birds which migrated to Kolleru. We saw the museum in the Kolleru. There we saw the board containing the species of the birds. If we press on any button below the bird picture the sound of the bird will come. We enjoyed a lot in the Kolleru.

Then we went to boating into the Kolleru lake where we saw many migratory birds. The boat man explained the birds which were migratory birds. The climate is very peaceful. It is a beautiful environment.

The cybains and pelicans birds are most common. It was seen that was very exciting movement.
