PODCAST

Mark Doudlah shares his story of being a proud chemical farmer who fully transitioned to organic after a devastating family loss. He reflects on his father's cancer, the culture of "feeding the world" that influences so many Midwestern growers and how the glyphosate he once relied on to farm still poisons his family's drinking water. He also celebrates the tools, cover crops, and growing methods that helped his farm find a different path.

NEWSLETTER

"I thought I built my house on a rock, but I built it on sand. The sand washed away, and I realized that this chemical farming, and everything that I was programmed to believe, ultimately was a lie."

- Mark Doudlah

SOCIAL MEDIA

Mark Doudlah believed he was feeding the world. Then his father was diagnosed with mantle cell lymphoma, forcing him to question the chemical farming system he had trusted for decades.

Today, his fields are among the only green ones in his neighborhood each spring, filled with cover crops, living roots, and rebuilding soil. His story is a powerful reminder that change is possible, even in an ocean of glyphosate and GMOs.
