

Quantum Physics

by Skipperdoodle Productions

We think of scientific discoveries as external to ourselves.

When, in fact, all “discoveries” are really rememberings of things innate we inherently know to be true.

Thus, we are both a point in time

And a wave of collected moments.

Seeming to move through time but actually binary, like all things,

Briefly here, and then gone.

Pause to feel the wonders of the entire universe encompassed by your heart.
