

The City of Watertown has been fortunate to have Jonathan Nico as an engineering intern in our Department of Public Works since 2018 through a partnership with Watertown High School's Cooperative Work Program.

Jon started his experience at City of Watertown as a member of the WHS Apprenticeship Program lead by Mrs. Sarah Tarpey. Jon had participated in several technical education classes before entering the internship program and was then placed in the Watertown Department of Public Works' Engineering Division. He continued with his internship after graduation from WHS in 2018 and came back to work during breaks through his college years at UW Green Bay and UW Milwaukee.

The City of Watertown Department of Public Works values the years that he has provided the city. Jon started by scanning documents for Engineering and progressed through the years to being a valuable part of the staking crew on the Clay and Sand Street projects. He was also helpful in surveying work with the City of Watertown vendors in the Farm and Fleet subdivision.

Now, Jon is relocating to the St. Paul area to continue in his chosen career path. Congratulations, Jonathan, on your upcoming graduation and bright future as a civil engineer.
