Bob Greenyer,

PLEASE IDENTIFY YOURSELF ABOVE BEFORE EDITING

INTRODUCTION:

We need to make it as easy as possible for people to educate themselves on our project and the science and history surrounding it. Please consider helping us achieve this by employing your language talents for the greater good.

HOW TO CONTRIBUTE:

1. Build a table similar to the examples below
2. Choose a section of the site not translated already
3. Add page title in 'Heading 2' format
4. Cut and past the english into the left hand column
5. Enter the translation on the right
6. Add hyper-links to appropriate text

If you are not the first person to translate a page but you feel you could improve the translation, please consider improving the accuracy of the translation.

Thanks from the MFMP team!

The New Fire	
There are recent scientific experiments that hint of an incredible, clean energy future for the world. The effect goes by many names. We simply call it the "New Fire" because, if validated, it has the potential to replace most of the combustion energy sources in our world today.	
Our Goal	
Our goal is to facilitate the wide-spread replication and validation of New Fire experiments, such as Francesco Celani's, at reputable research institutions around the world.	
Once proven, research funds and private capital will flow into the field and result in some amazing, life saving, and life improving products.	
For a more detailed introduction to the Martin Fleischmann Memorial Project: MFMP Intro .	
Our Plan	
To make the biggest impact and overcome the hurdle of institutional bias against this type of phenomenon, we aim to make the whole process, from the apparatus to the procedures, to the whole plan of the project, as transparent and understandable as possible. We want this project to be for the people by the people as much as possible. We will be open about the plan, the designs, the process, the data and the results.	
The other part of the plan is you. We will pursue crowd-sourced funding, crowd-sourced engineering, and hope for near real time scientific review. Are we 100%	

sure we the New Fire is real and reproducible? No. But given the is significant evidence that it is, isn't the upside for the world worth attempting to validate it?	
Plan Steps Celani Replication Plan Presentation Details of Initial Replication Experiment Our Progress Blog	
How you can help	
• We need to raise the money to develop and distribute copies of this apparatus to ten research institutions around the world. We are targeting \$500,000. Donate here. Or bid to own a piece of this, hopefully, historic project.	
• We will be setting up a Crowd-sourcing initiative soon. It will be listed right here and elsewhere when we do. The idea of a global, grass roots effort overcoming the institutional biases and bringing this to the attention of mainstream science and industry is so cool. Of course, a visionary philanthropist who recognizes the potential of this and funds the whole historic initiative also makes a good story.	
• We need to get the word out that this project exists: Check out our web page, Like us on facebook, tell your friends	
• Follow our progress on our Progress Blog where we will share, day by day, the achievements, the setbacks, and the data.	
• Contribute to the engineering by posting suggestions and comments. Contribute to the science by adding suggestions about the experiment design and analyzing the data yourself.	

- | | |
|---|--|
| <ul style="list-style-type: none">• We need suggestions for which research institutions should receive the first ones. Ask yourself or your friends who would you trust to confirm that the New Fire is real. | |

A brief history that led to the New Fire	
As the world's population increases and its natural desire for a better standard of living puts pressure on traditionally exploited and accepted energy resources, there is a growing need to explore cleaner alternatives where possible as the current trend is predominantly towards dirtier and more difficult to extract hydrocarbons.	
In August 2012, one of the worlds best ever electrochemists, Martin Fleischmann, died . 23 years ago this great man along with Stanley Pons showed the world there was another way... The world refused to listen .	
Thankfully, some very intelligent people recognised that a brilliant mind such as Martin's, would not allow him to say something that he did not truly believe in and they chose to pursue his research.	
Millions of man hours of research by individuals, governments and corporations all across the globe, have in the past few years started to result in commercially viable implementations of discoveries spawned from Fleischmann and Pons' Work.	
Many of these new discoveries are showing much more than the fusing of matter and many operate at well above bath temperature releasing copious amounts of thermal energy with no harmful byproducts. Therefore, the moniker that was forced upon the original discovery is inappropriate to adequately describe the reality we see today. Like fire, heat is produced, but in a different, much	

bigger and cleaner way, it is clearly an upgrade and so we are calling it the New Fire .	
The New Fire can use cheap, non radioactive material such as small amounts of specially engineered standard nickel and minute amounts of normal hydrogen to safely release astounding quantities of energy with no harmful by products or CO2 emissions.	
If you want the very latest news on the evolving story, there are many sites you can go to such as this one .
