

## Discovery Committee Meeting

April 02, 2019

Minutes

### Discussion topics

- Status of Ticket Prioritization
  - Marmot has gotten everyone's feedback
  - Marmot has taken the favorites and requested tickets and put them into a spreadsheet
  - The Software Development team will meet with the Executive Director in April to discuss detailed decisions on the requests
- Hoopla Integration Review
  - Patron Interactions
    - Checkout Hoopla button in place of 'Access Online'
    - Checkout titles directly from catalog
    - Hoopla titles will display in checkouts and reading history
  - Questions from the Group:
    - **Q:** Hoopla will still be "under" any matching OverDrive records (even if OverDrive is not immediately available), and you would have to expand to see the Hoopla button?
    - **A:** For now. Part of the integration will be to decide by source you want displayed, and that will show in the primary button.
    - **Q:** The OverDrive integration has the ability to download a checkout, will Hoopla have the download option down the road, or does their API even allow it?
    - **A:** Hoopla download is not in their existing API.
  - Notes on Hoopla Data Extract
    - Will continue to use traditional MARC records from Hoopla that are delivered once a month
      - There is no real-time connectivity to Hoopla's holdings
    - Hoopla integration will display additional information in records
      - 'Hoopla Extract Information'
    - Suppression by price is available with this release but will be applied to all material types (kind)
      - There will be additional suppression options offered by type (kind) and price

### Demo of new features, bug fixes, and documentation for upcoming release

- [Release Notes](#)

### Discussion of development priorities for the next release

[Road Map](#)

### Current Release

- Aurora Implementation
  - The team has a site visit with them next week
  - Top priority for the team
- Integrate Hoopla API
  - Working with the Hoopla API as discussed during the meeting
- Sacramento Discovery Partner Implementation
  - Reading history issues

### Next Release

- Sierra API Patron Integration
  - Chris will be working on this project
  - This will replace the screen scraping of the Classic OPAC for patron interactions
  - It will replace it with proper calls to the API that are more reliable
  - This will not be new functionality, it will be more reliable functionality

- Horizon ROA Driver
  - Work still needs to be done on self registration and reading history

#### **Next Quarter**

- Sierra API Extract
  - This is the real-time indexing of bib records that LION has been beta testing for Marmot for over a year
  - Need to fix a technical obstacle that exists for using this for Marmot

#### **Short Term**

- Near future is planned out well

#### **Long Term**

- Going through the prioritization process will help to clean up or specify projects
- Longer term projects will change in some fashion

#### **Reports from libraries on special projects**

- Nashville Odilo Sideload
  - The MARC records have language that is not appropriate for the schools
  - James created a process that cleans up the MARC for sideloading
  - Sideload audience determination using crosswalking from 521 field to 006
  - MarcEdit task
  - James will make this process available to anyone else who would like to sideload Odilo

#### **Other Topics**

Discovery attendees asked about the following sideload possibilities

- [Creativebug](#) - Ashley is waiting for MARC records
- [Acorn](#) via RBDigital
- [myTurn](#)
  - This would be an API connection rather than a sideload
- The Software Development team will try to sideload any eContent collection
  - The basic requirement for a sideloaded collection is MARC records

**Next Meeting is Tuesday, May 7th**
