

1. Open new tab and make login vb.rebelbetting.com
All those login usernames and passwords are in config file.
2. Make login into betfair.com and (click accept the Cookies). Put username into field and put password into field and make login. Those are in config.file
3. Open new tab and make login into betvictor.com/en-en click cookies away and put username and password into fields and make login.

Rebelbetting I use bookmakers Veikkaus (by manually), BetfairSportsbook and BetVictor, so in Bets tab there can comes announcements about BetVictor, Veikkaus and Betfair. You poll this site all the time, every second or something. Put the poll time in config. Then I can change it also 😊.

4. When there comes announcement about value bet. You read the bookmaker name from it. If it is xh BetfairSportsbook or xh BetVictor you click the announcement (I handle Veikkaus by manually).

RebelBetting Pro — Value bets

3.2%	AH(+0) Qalali FC, first half Bahrain - 2nd Division 2h BetVictor
2.5%	AH(-30.5) Serbia, overtime included World - FIBA World Cup, European C 6h BetVictor

2 value bets with your filters
2351 bets on all bookmakers

RebelBetting Pro — Value bets

7.8%	ALTERNATE aTTaX CS:GO - CCT South Europe 8h BetfairSportsbook
------	---

1 value bet with your filters
10814 bets on all bookmakers

5. After click the announcement there will be "popup" Where are the fields Odds, Stake EUR and Value %. You read for the log the Odds and Stake value and bookmaker name. Then you click the button BET.

Odds: 2.875 Stake EUR: 15 Value %: 7.8

6. It opens the bookmaker site and you know which one it is. There is open the right bet slip. You read from the bet slip the odd and compare it for the odd what has been read from rebelbetside. The odd can be change (they change fast). That is why we compare that odd,

that it is nearly same. Put into config how many percent the odd can be different, I can change it. So read only one decimal like 1,1 even there can be more decimals. If the odds is same or it can be like 5% (example different, which is read from the config). You will find the amount field and put the read amount from log into field and press "Place Bets". When this happens. You go back rebelbetting site and click "Log". If you do not make the bet. The odd was very different or can not find at all the Betslip (can also happen, if the bet has remove). Then you go Rebelbetting site and click "remove".

No Betslip can happen, if there is no bet. Then go rebelbet tab and click remove and start the poll announcements.

7. Also after bet, the cycle starts again. You poll Rebelbetting announcements. This is what we do all the time. The cycle newer stop. We do that both BetVictor and Betfair site. BetVictor is pretty same and that's why I use example Betfair site.

In configfile must be also how fast it opens the bookmaker site, the I can change it.

How fast it clicks "Place bets" after the amount has been put into field.

How fast it open the rebelbetting tab after click "Place bet" or did not make the bet.
