Website Visitor

Description
A website visitor is a public user who accesses the Life Changing Consulting website without logging in. This actor represents potential clients, partners, or general users who are interested in learning more about the organization and its services.

Role
The website visitor can view all publicly available pages on the website, including informational sections such as the home page, services, impact, and accelerator content. This actor can navigate the website on both desktop and mobile devices and may submit contact or inquiry forms. Visitors may also choose
to join mailing lists or express interest in consulting services or programs offered by Life Changing Consulting.

Sponsor (Client / Organization Owner)

Description
The sponsor is the primary stakeholder and owner of the Life Changing Consulting website. This actor represents the organization or individual for whom the website was built and who has final authority over content and deployment decisions.

Role
The sponsor reviews website content and design changes, provides feedback to the development team, and approves final deliverables. This actor receives administrative access credentials for systems such as GitHub, Netlify, and database services. The sponsor may review contact submissions, mailing list data, and other information collected through the website and is responsible for ongoing ownership after project handoff.

Development Team

Description
The development team consists of the individuals responsible for designing, implementing, deploying, and documenting the Life Changing Consulting website.

Role
The development team designs and builds the frontend website, configures backend services and database integrations, and manages version control through GitHub. This actor deploys and hosts the website using Netlify, applies revisions and bug fixes, and creates technical documentation and user guides to support long-term maintenance and sponsor handoff.

System Administrator

Description
The system administrator is a technical user responsible for managing the website infrastructure after deployment. This role may be fulfilled by the sponsor or by a designated technical representative.

Role
The system administrator manages hosting and deployment settings in Netlify, controls access to the GitHub repository, and maintains database configuration and security policies. This actor is responsible for managing domain settings, renewing services if necessary, and ensuring the website remains functional and available over time.

Database System (Supabase)

Description
The database system is an external backend service used to store and manage structured data generated by the website.

Role
The database system stores contact form submissions, mailing list entries, and other collected data. It enforces database security policies, maintains data integrity, and provides backend access for website integrations.

Hosting Platform (Netlify)

Description
The hosting platform is an external service responsible for serving the Life Changing Consulting website to end users.

Role
The hosting platform hosts the static frontend website, automatically deploys updates from the connected GitHub repository, manages SSL certificates and HTTPS connections, and maintains deployment logs and history.
