February 19, 2024

Many Digital Cane Mill owners have converted to the **Positive Rake Cutter** and are getting extremely clean enamel edges on their strips. They are available in 61-, 73- and 91-degree geometry and come with the entrance shoe which holds on to the strip within a few thousandths of the cutting action. We have one of each in stock.

Kevin and I have been busy the past few weeks. We have now shipped 8 of the new planing forms and have started CNC machining a new batch.

The 199th MultiTrack beveller was the latest shipment. Who wants serial #200? We are building it now.

Kevin's new fixture #4 for squaring has been selling at 3 to 4 per month. This innovation makes a near perfect 90 deg edge on a strip to make it nest securely in fixture #2 to cut an accurate first 60-degree angle. We have a number of these in stock.

Binder serial # 119 was shipped just before Christmas. This is the smoothest running binder we have ever produced. The design has not changed - the difference is that all components are now milled and turned on Kevin's CNC machines.

Digital Cane Mill #15 should ship in a few weeks. All mills now feature the positive rake cutter and the entrance shoe, which combined, produce excellent enamel edges - even on butt strips supported on a strip carrier just used to cut a tip. That tip was experimental, having a .015 strip dimension at station zero just to see if I could. A couple of years ago I was hesitant about a .025 tip! Now looking for orders for #16 & 17. Order now for delivery at GrayRock in June.
