

The average person creates 5 pounds of trash a day. Littering is when you throw something in the ocean or the streets. Unfortunately almost everyone litters. I believe littering is bad because the earth is dying.

One reason littering is bad is because animals are dying because of litter. For example more than 1,000,000 animals die from plastic every year. I feel sad because 1,000,000 die because of plastic. If people didn't litter, animals wouldn't die. According to global guardians recycling, reuse and conserve. If we don't do something about this by 2050 there could be more plastic than fish in the world's oceans.

However, critics argue that littering is good because they think that it is easy for them. Littering is wrong because if you keep on littering you are going to have to clean it up. This is not a good reason because even if it is easy to throw on the floor it will be hard later to clean.

To summarize, littering is bad for the planet and animals. You must stop littering because the plastic is hurting the animals. One way you could stop littering is throwing your trash in the trash can.
