

Software Engineer

New York City, USA · Hybrid (3 days on-site)

About the Opportunity

At ElitePath Consulting, we partner with forward-thinking companies building the future of AI.

This opportunity is with a well-capitalized, high-conviction team redefining how multi-agent systems are built, understood, and trusted.

They are starting fresh — a new engineering direction, a clean foundation, and a product vision focused on solving one of the most important problems in AI today.

The Role

You won't just join a team — you'll help build it.

As one of the first engineers, you will shape:

- Product direction
- System architecture
- Engineering culture

There is no backlog waiting for you.

You will define problems, think deeply about solutions, and build systems that matter.

A significant portion of development is AI-assisted — your role is to guide, validate, and elevate output quality, not just generate code.

What You'll Be Solving

When AI agents operate in production, critical questions remain unanswered:

- Was the decision correct?
- Why did it fail?
- How should it improve?

You will work on the infrastructure that brings clarity to these questions, including:

- Observability systems
- Evaluation frameworks
- Attribution layers
- Policy enforcement mechanisms
- Interfaces that simplify complex agent behavior

The problem is clear. The solutions are still being defined.

Core Requirements

- Proficiency in Python or TypeScript
- Strong understanding of systems (logs, traces, distributed behavior)
- Experience with Docker and containerized environments
- Exposure to LLMs (building, prompting, or studying)
- Ability to effectively use AI coding tools

Preferred Experience

- Observability or monitoring infrastructure
- Developer tools or platform engineering
- Agent frameworks or LLM applications

Compensation & Benefits

Competitive salary + equity of **\$150K+ USD**

- Strong financial backing
- Flexible work environment
- Generous PTO
- Global offsites
- Learning & development support
- Direct access to leadership
- Clear growth trajectory

How to Apply:

We're not looking for perfect resumes.

We're looking for how you think.

Share something that reflects your thinking:

- A project
- A technical write-up
- A teardown of existing tools
- Or anything similar
