I use forms for testing and flubaroo for grading.

12:48 PM

Flubaroo is a script that use use with your form to grade. So I use a form to test and then I take the test, it places all answers in a Google Spreadsheet and then I run Flubaroo to grade. Simple to use. Search for a youtube video and you can see how to use it. It has been wonderful and saved me tons of time.

Kirsten Wilson

12:45 PM

Megan, we use it for PD, student ticket out, and for parent feedback.

Ryan MacRaid

We use it to determine where they are in the learning process of a content area to individualize PD in a content area; we also use it to determine how they are interpreting student data to see what we need to address... streamlines and keeps us from addressing things they already know or back up if they need more schema in an area. We also use this with flexible tech training.
