

The Lobotomy Levels List

Levels here are not ranked by difficulty, but ranked by stupidity. Made as a joke after the 2.2 update got released and an insurgence of lobotomy levels started to exist.

RULES:

- Levels must be more than or equal to 20 seconds long in classic mode. Platformer levels don't have a fixed standard but ideally make it at least 100 blocks long
 - This is to prevent low effort submissions that are either not funny enough or just straight up "bad" instead of "retarded".
 - Platformer levels will b.e judged based on creativity, stupidity and effort mostly instead of length
- Levels have to be physically possible.
- Levels should be made in 2.2, but exceptions will be made if the level is stupid enough
- Levels don't have to have the word lobotomy in the name, but have to fit the theme of lobotomy. Therefore rated levels made with the intention of being silly but being rated can be on the list. An example of a level that could get on the list that is rate worthy is logodomy.
- Random sfx = better
- List mods (if they even exist) are not allowed to place their own levels.
