Data Spaces for effective and trusted data sharing

About this community

This is the i4Trust Community, an inspirational and open space to share and learn from best practices on Data Sharing.

i4Trust is a collaborative initiative that enables a select group of small and medium-size enterprises (SMEs) in various sectors and geographies in Europe *to effectively share data in a secure and trusted manner across value chains*. This will allow them to work more efficiently, save time and money, and reduce their carbon emissions. i4Trust provides the right tools, coaching, mentoring and initial funding to break down barriers to data sharing and support the creation of Data Spaces.

The goal of this community is building the foundation of an ecosystem where companies will be able to create innovative and interoperable services in different sectors by means of breaking "data silos" through sharing, re-using and trading of data assets. Actors in this ecosystem will share data by using iSHARE, CEF and FIWARE Building Blocks and adhering to common data models.

Spaces

- **General**

General public space for the community

- **Onboarding desk for DIHs**

A dedicated space for the DIH to learn more about participating opportunities at i4Trust and its value proposition for them
