

Sitemap Diagram  
Contentarea  
version 1.0

UiaML Symbol

Symbol Properties

Property	Type	Description
Contentarea ID	String	Unique name within the site project for each content grouping.

Documentation Properties

Property	Type	Description
Contentarea ID	UiaML path	The Contentarea ID part of the UiaML path has to be identical to the one used by the Symbol Property.
Description	String	Text that describes the information that will be represented by this contentarea.

Explanation

A contentarea is the container that hold several contentarea elements (CAE), like text, images or input fields. There are no hard rules about the boundaries of a contentarea, but often a deployed contentarea is recognizable by a different background or a frame that groups the content. A contentarea might reappear on several different pages within a single site. The menu is an example

of such a contentarea.

Within a UiaML Sitemap there is for each contentarea with the same contentareaID exactly one contentarea symbol in which the contentareaID is underlined. This is the defining contentarea. Only from that contentarea links to other pages may be drawn.
