

SPEAKER 1

You're going blind. Those were the words a doctor said to actor Morgan Freeman, who had been battling macular degeneration for months. Morgan disappeared from film sets after dark spots started taking over his vision until he was almost completely blind. But after going through such a dramatic time, Morgan's vision is now fully restored. He shared in an interview that he went through a groundbreaking treatment based on ocular stem cell reactivation that made his eyesight crystal clear again.

SPEAKER 2

Eye problems can lead to blindness really fast. That's why you should never ignore them. Just weeks after I first noticed my vision getting blurry, I was nearly blind and the doctor told me there was no hope for a cure. But thank God a friend introduced me to Dr. Thomas Harper. This researcher spent years studying regenerative therapies at Johns Hopkins and discovered three natural ingredients that when combined, can reverse eye damage that old school doctors still claim is irreversible. Most vision problems actually have a cure and are just misdiagnosed. In less than three weeks, you can start seeing incredible results with the method Dr. Harper created.

SPEAKER 1

This is a bold claim, but it's backed up. Nearly 20,000 people have already fully restored their vision using Dr. Harper's NASA based formulae. Just Johns Hopkins expert mentioned by Freeman. So if you have nearsightedness, glaucoma, cataracts, or any other vision problem, don't miss the interview we're about to show. Dr. Thomas Harper will reveal exclusively for America's Health Report, what's behind his stem cell regenerating vision formula and how you can easily use it at

home without needing eye drops or surgery. Watch now. Dr. Thomas Harper.

SPEAKER 3

If you see dark spots that seem to follow your gaze, need to squint to read messages on your phone, and feel like your vision is getting blurrier with each passing year, then you need to watch this interview right now. Because what we're about to reveal could give you back a vision so crystal clear you'll be seeing like you did in your 20s. We've just uncovered that a top secret NASA program originally designed to protect astronauts eyesight in space has identified the real cause of the vision loss affecting 87% of Americans over 50. And what they discovered is shocking. Your eyes are being pierced from the inside, leading to trouble, driving at night, constant headaches, and the inability to recognize faces from a distance. Scientists are calling it ocular corrosion. And it's being caused by a common food sitting in your kitchen right now. Actually, 9 out of 10 grocery store foods contain this evil invader that's literally corroding Your vision from the inside out, like acid melting through metal. NASA has known about this for years and developed a revolutionary eye protection protocol for their astronauts. A treatment that could restore the vision of every American. But it's been kept under a lock and key by the multi billion dollar pharmaceutical industry. Sounds crazy. Just think about it. Have you ever seen a veteran astronaut wearing glasses? Neil Armstrong had Perfect Vision at 82. Buzz Aldrin is still flying private planes at 93. And John Glenn, he went back to space at age 77 with the eyesight of a fighter pilot. The most surprising part, these ingredients are are totally common. And anyone can use this treatment from the comfort of their own home. Bringing back crystal clear sharpness, vibrant color vision and freedom from those thick, expensive glasses. And

today, the secret behind this protocol is finally being revealed by the man I have the honor of welcoming to our show, Dr. Thomas Harper. An ophthalmologist trained at Johns Hopkins who's been targeted by the billion dollar eyewear and eye treatment industry. He's here to reveal how a NASA developed sublingual formula is wiping out those floating dark spots that follow your gaze in just 12 days, restoring peripheral vision that you thought was gone forever. And 28 days, bringing back clarity and sharpness even in low light, regenerating right retina cells that doctors said were impossible to recover. And the most amazing part, all of this happens without risky surgeries, without painful eye injections, without chemically addictive eye drops, and without those thicker, more expensive glasses every year. But I have to warn you, this broadcast could be shut down at any moment. The giants of the optical and pharmaceutical industries have already tried to block Dr. Harper five times from sharing this information with the public. That's why we decided to air this interview as a matter of national urgency. So if you're tired of gradually losing your independence, tired of not recognizing faces from a distance, tired of asking for help to read instructions or giving up on driving at night, then stay with us for the next few minutes as Dr. Harper reveals the truth that has already restored crystal clear vision to over 47,000 Americans who thought they were doomed to live in progressive darkness for the rest of their lives. Hello America. I'm Brad Cullen and you're watching another episode of Health in Focus, the show that uncovers the biggest medical mysteries throughout the threatening the health of Americans. And today, we're revealing how everyday people are completely restoring their vision from the comfort of their own homes. Today's show is sponsored by the American foundation for Preventive Health, Johns Hopkins University and the Vilmer Eye Institute, which introduced us to the extraordinary expert joining us today. I'm talking about Dr. Thomas. Thomas Harper, an ophthalmologist trained at Johns Hopkins University, chief director at the

Advanced Institute for Ocular Regeneration in Boston, and president of the International Board for Macular Degeneration Research. Welcome, Doctor.

SPEAKER 4

The pleasure is all mine, Brad. It's a true honor to be here and talk about eye health, something I've dedicated my entire life to studying. And today I've brought a special little gift for the viewers.

SPEAKER 3

Oh, really? A gift? I like the sound of that. If you're watching at home, stick around to claim yours. Dr. Harper, I know you're considered one of America's leading experts in ophthalmology, but is it true that your greatest discovery came from your own father's vision problem?

SPEAKER 4

Unfortunately, yes, Brad. My father suffered from severe macular degeneration and he nearly lost his vision entirely.

SPEAKER 3

And is your father here with us today?

SPEAKER 4

Yes, he is. Dad, would you come up and share a bit of your story with us? How are you? Good evening.

SPEAKER 5

I'll do my best.

SPEAKER 3

Mr. Harper, welcome. Can you tell us a little bit about how it all began?

SPEAKER 5

Well, at first it was just a few dark spots that would show up now and then. I didn't think it was anything serious. Some days I could see better than others, but I couldn't manage. Or so I thought.

SPEAKER 4

What my dad's modestly leaving out is, you know, he's the most stubborn, tough as nails Texan you'll ever meet. Brad, this is the kind of guy who's up before the sun. Can fix anything with pliers and duct tape. And of course, he hates hospitals and doctor visits, even when the doctor is his very own son. Br.

SPEAKER 5

Thomas always exaggerates, but I was. I was never one to worry too much about those things.

SPEAKER 3

When did you realize it was actually serious?

SPEAKER 5

It was just a regular Saturday. I was backing my old pickup truck out of the garage to head over to the barn on the other side of the property. Had to fix the fence that was acting up, nothing major. Then I heard a scream. Then I. That froze my blood. It was Lily, my seven year old granddaughter. The princess of the ranch. She had run over to join me to see Star, a little filly that she absolutely loved.

SPEAKER 4

I didn't.

SPEAKER 5

I didn't see her coming near the truck.

SPEAKER 3

My God. What happened next?

SPEAKER 5

I slammed the brakes immediately. Thank God. I stopped in time. I jumped out of the truck. I ran to grab her, but she ran away from me, scared. And that shattered me inside. My daughter in law came running and yelling, what happened? What happened?

SPEAKER 4

And I heard the shouting and ran over to see what was going on. And I found my daughter in her mother's arms, crying and

terrified. And then I looked at my dad standing there, pale as a ghost and just repeating over and over, I didn't see her. I swear I didn't see her.

SPEAKER 3

And what did you do, doctor?

SPEAKER 4

I went straight to dad and I said, dad, this has to stop. I already told you, you can't drive anymore. Your vision isn't what it was when you were 30. And we're gonna go inside right now. I'm going to examine you. So we improvised the exam right there at the kitchen table. I used a flashlight I had in the car and some basic tools I was always carrying with me. And that's when I saw something that shook me to my core. Micro hemorrhages all over his retina. A textbook case of advanced stage macular degeneration. Telling my father, my hero, that he had advanced macular degeneration and that he could eventually go blind. That was the hardest moment of my career.

SPEAKER 3

Mr. Harper, what went through your mind at that moment?

SPEAKER 5

I remember asking what we could do to stop it. And he told me there were intraocular injections that can help slow the pain process.

SPEAKER 3

Wait, are you talking about literally injecting something into your eye?

SPEAKER 4

Exactly, Brad. The needle goes through the sclera, the white part of the eye, and delivers medication that slows down the degeneration.

SPEAKER 5

Of course, I didn't want to go through with it. Besides sounding like torture, those injections have to be done every six weeks, and they cost a fortune. \$400 per injection. That's nearly \$3,500 a year. And even then, it only slows the process.

SPEAKER 3

So what happened next?

SPEAKER 5

He gave me the absurd suggestion of selling the ranch. And then what? A nursing home depending on other people just to go to the bathroom? I'd rather die.

SPEAKER 4

And that broke me. You know, I had always taken pride in my diplomas, my titles, the awards that I. I'd received. But that day, I felt like a total failure. A renowned specialist who couldn't even help his own father. Thank you, dad. You can go get an off camera seat now if you'd like to.

SPEAKER 5

Thanks, Bob.

SPEAKER 4

And what I'm about to say might sound crazy, but the truth is we're thankful to God that this happened. Because even though it was our worst nightmare, it also became our great blessing. It was thanks to this experience that I discovered a natural treatment developed by NASA to keep astronauts eyes perfectly healthy, even at 70, 80 or 90 years old. That's why you've never seen any astronaut wearing glasses, even decades after their space missions ended.

SPEAKER 3

Wow, that's incredible. Can you tell us more about that? Actually, could you first start by explaining why vision problems happen in the first place?

SPEAKER 4

Of course. To start, I need to clear up some of the biggest myths about vision problems. People say that losing your eyesight is just a natural part of aging, that it's genetic, or that it's caused by screens. That's just not true. Those things do make the problem worse, but they are not the real cause. The true cause of vision loss is something else entirely. It's a common ingredient found in 9 out of 10 foods you buy at the supermarket. An invisible enemy that's triggering what scientists at Johns Hopkins University are calling ocular corrosion.

SPEAKER 3

Ocular corrosion. Can you explain that in more detail?

SPEAKER 4

Absolutely, Brad. To understand how this happens, we first need to talk about stem cells. For those of you watching at home who don't know what stem cells are, their job is simple. Stem cells transform into whatever type of cell your body needs. They're like the raw material at the start of a production line. For example, when your heart cells get old and start to die, stem cells turn into fresh, healthy heart cells. The same thing happens in your liver, your kidneys, and yes, even your eyes. So when any part of your eye tissue gets to damaged, whether it's in the cornea, retina or macula, stem cells rush in and literally rebuild the damaged tissue. It's a perfect self repair system that keeps your vision sharp and crystal clear for life. As long as you have enough stem cells. That's why you'll never see a baby wearing glasses. Their eyes are full of powerful regenerative stem cells.

SPEAKER 3

That's incredible. I've heard of stem cells before, but I didn't know they were responsible for good vision. But I do have a question. Shouldn't a lack of stem cells only be a problem for older people? Why are more and more young people needing glasses? My son is only 14 and already wears them.

SPEAKER 4

That's a great question, Brad. I'll explain in a moment why early vision problems are becoming more and more common. But first I want to make sure the stem cell explanation is crystal

clear. So I recorded a video in my lab where I show the ocular stem cells of a person with perfect 20/20 vision. Can we show that?

SPEAKER 3

Of course.

SPEAKER 4

Photos of stem cells taken by my cell phone camera through my microscope. Look at that. See how numerous Bright and robust they are. Now I'm going to show you the stem cells of a patient with advanced macular degeneration. Notice how there are far fewer cells and they look damaged.

SPEAKER 3

My God. The difference is shocking. What causes that?

SPEAKER 4

Something everyone knows is bad but can't seem to live without Sugar. It's no secret that excess sugar can lead to weight gain and type 2 diabetes. But what 99% of Americans don't know is that sugar also leads to vision problems and even blindness. This happens because sugar contains microscopic crystals that literally pierce your delicate stem cells like thousands of tiny needles, over and over again, destroying them one by one. That's why in the second image, you saw such a small number of stem cells. They've been devastated by years of sugar consumption. And when sugar crystals destroy your stem cells and they poke away at them, your body has no way to repair

the damage done to your eyes. That's why over time, you feel your vision slowly getting worse and worse.

SPEAKER 3

That's truly alarming. Doctor, is there any way for our viewers at home to find out if this ocular corrosion is happening to them?

SPEAKER 4

Yes, there absolutely is. Because sugar crystals don't just pierce stem cells, they pierce everything in their path. And that leads to a variety of easy to spot symptoms. So if you're watching at home, answer these questions honestly. When you walk outside at night, do you see halos or rings around lights? Do you frequently wake up with red or irritated eyes? Are you having trouble recognizing faces, reading small text, or noticing fine details? If you answered yes to any of these questions, it means that you are suffering from ocular corrosion right now. Now, to find out if your case is more serious, I have one more question. Have you ever looked at a clear sky or a well lit white wall and suddenly noticed dark spots like threads, cobwebs, or specks inside your eye that move when you try to focus on them, which means you need to take action as soon as possible.

SPEAKER 3

Doctor, that's incredible. I never imagined sugar could lead to blindness. But now that you're saying this, I just remembered my uncle who has type 2 diabetes went blind. Is that related?

SPEAKER 4

It is absolutely related, Brad. A diabetic has excess sugar in the bloodstream, which means more sugar pierced in the eye and eventually leading to early blindness. To give you an idea, type 2 diabetes is currently the leading cause of blindness in the United States. But, and here's a critical point, you don't need to be diabetic to suffer this damage. The average American can see consumes 152 pounds of sugar per year. That's about 43 teaspoons a day. And the worst part, 84% of that sugar is hidden in most foods people don't even consider sweet. For example, this healthy ranch sauce, 2 teaspoons of sugar per serving. This whole grain bread, 3 teaspoons of sugar per slice. This probiotic yogurt, 6 teaspoons of sugar. In fact, 9 out of 10 grocery store items contain hidden sugar. And you have no idea. Each one of these foods is silently corroding your eyes from the inside out.

SPEAKER 3

Dr. That's absolutely terrible because these days sugar is practically in everything.

SPEAKER 4

Exactly. Unfortunately, that's the reality today. Most people you know already wear glasses. And now to answer your earlier question about why kids and teens are having vision problems so young, check this out. A groundbreaking study from Stanford University followed 3,700 pregnant women for 15 years. And guess what they found? Women who consumed more than 50 grams of sugar per day during pregnancy had children with a 74% higher risk of developing myopia before age 13. That's because the mother's sugar crosses the placenta and begins damaging the baby's stomach stem cells before it's even born. So when that child hits adolescence around 12 to 14, their stem

cells are already drastically reduced, leading to early vision problems. Now you see, it has nothing to do with genetics or age.

SPEAKER 3

I'm shocked. That explains so much. Doctor.

SPEAKER 4

Yes, and that's why you watching at home need to understand something. There is nothing natural about going blind. At 6, our ancestors had perfect vision into their 80s and 90s because they didn't consume the insane amount of sugar we do today that slowly pierces our eyes every day? Let me ask you something, Brad. Why do isolated indigenous tribes who've never tasted refined sugar have near zero rates of macular degeneration even amongst their oldest members?

SPEAKER 3

That's true. I never thought of it that way. But Doctor, if this information is so important, why haven't we heard about it before? Why don't we see news reports on TV about sugar and blindness?

SPEAKER 4

The answer is obvious, Brad. Did you know the five biggest processed food companies in the world spend over \$37 billion on advertising last year alone? Do you think any TV network is going to air a story about how sugar is destroying your vision when their biggest advertisers are selling sugar liquid loaded breakfast cereals?

SPEAKER 3

That's truly infuriating. So what should people do? Just quit sugar?

SPEAKER 4

I wish it were that simple. But the only way to reverse these problems is to rebuild the stem Cells in your body.

SPEAKER 3

And how can we do that?

SPEAKER 4

That is the million dollar question. At first, I believed that once your stem cells were destroyed and ocular corrosion had started, the process was irreversible. But when it happened to my father, I couldn't accept that. I went into a mindset that only someone who's watched a loved one on the verge of blindness could possibly understand. I started going to medical conferences I normally would have ignored. Reading obscure scientific papers, contacting specialists that conventional medicine calls eccentric. It was at one of those conferences in Boston, not even about macular degeneration, but about neurological recovery after trauma, that everything changed. I gave a talk on new approaches to treating macular degeneration. In the middle of my presentation on experimental techniques, my voice cracked. I tried to play it off, but when I mentioned that it was my own father losing his vision, a man in the back row lifted his head and I noticed because he was the only one. Everyone was glued to their phones or laptops. After

the talk, I was packing up my things. He came over. He didn't introduce himself right away. He just asked your father, how much longer will he be able to see? I said, two years, maybe one. A bit confused then. There's still time, he said. It was only when we exchanged business cards that I realized who he was. Dr. Alan Reynolds, retired chief ophthalmologist of NASA's space medicine program. Not a household name, but. But anyone in high performance ophthalmology knew of him. We scheduled a coffee for the next day. He never showed up. Just as I was about to leave, a waiter handed me an envelope. Inside a flash drive and a handwritten note. It said, this.

SPEAKER 2

View this on a computer not connected to the Internet.

SPEAKER 3

Call the number below after.

SPEAKER 4

What I found on that flash drive changed my life forever.

SPEAKER 3

What was on it?

SPEAKER 4

Hundreds of internal NASA documents marked classified, some dating back to the Apollo era, others from the late 90s. The most important one was a full report on Project iris, a classified eye protection program developed during the Cold War. Now,

Brad, have you ever noticed something strange about veteran astronauts?

SPEAKER 3

What do you mean, strange?

SPEAKER 4

I mean, have you ever seen an astronaut wearing glasses? I don't think exactly. You haven't? Buzz Aldrin, at 93, still pilots airplanes. John Glenn returned to space at age 77, when NASA still required perfect vision for any mission. Neil Armstrong had 20/20 vision until his final days. The report explained why Space radiation is absolutely devastating to the human eye. It literally pierces eye cells like microscopic bullets. 24 hours a day, seven days a week. That's why NASA developed this operation. A way to protect and regenerate astronauts eyes. So they could properly read a critical instrument or identify a system failure. An astronaut with compromised vision puts not only their own life at risk, but also the entire crews and billions of dollars in equipment. And that's why they created this sublingual formula, QnS1 7. Which protected astronauts eyes and also regenerated the stem cells that were being damaged on a daily basis. And then the daily application of that formula became mandatory. Because it was the only way to maintain the astronauts eye health. In other words, if this solution could protect and regenerate astronauts eyes against space radiation, the most hostile environment for human vision, then it could definitely protect and restore anyone's eyesight here on Earth as well.

SPEAKER 3

And why have we never heard about this?

SPEAKER 4

That's exactly what I asked Dr. Reynolds when we finally met three days later. And he explained that the private pharmaceutical company that funded the final stages of research held the exclusive rights to the formula. Which is why it was never made public. That's when I asked him why he was sharing all this information with me. He said his wife had gone blind from macular degeneration before she passed. He had the formula, but couldn't use it because of a confidentiality contract. And he didn't want to die carrying that burden. So he began to explain how the formula worked. Then he explained that the QNS117 formula is a complete regeneration system that works in three phases. Phase one, shielding. The primary compounds in the formula literally create a molecular shield around the ocular stem cells, preventing space radiation from piercing them. Now, in the case of regular civilians, that same shield blocks the sugar crystals that are attacking your eyes at this very moment. Phase two activation. This is what makes QNS117 revolutionary. It doesn't just protect existing cells, it wakes up dormant stem cells that every adult still has in their eyes. Cells that your body simply forgot were there. And here's the real miracle. And that's phase three, regeneration. The formula literally regenerates ocular stem cells. And then those cells begin to repair all the damaged eye tissue. Cornea, retina, macula, lens, everything. Thomas, if the formula could reverse damage caused by space radiation, which is 12 times more destructive than sugar crystals, just imagine what it could do for simple problems like glaucoma, cataracts or macular degeneration. He said. Then he handed me a sealed envelope. Everything you need is in here. The exact QNS117 formula. Precise ratios, extraction methods, administration protocols, everything. He then shook my hand and said goodbye with a warning. They'll try to stop you. Remember that. So I returned

to Boston, unable to sleep, my mind racing with the possibilities if those documents were real, if the formula worked. But as a doctor, I couldn't just believe it. I had to verify. That's why I spent the next few weeks obsessively studying every single ingredient listed in the documents, researching their properties, checking related studies.

SPEAKER 3

And did you find any scientific proof?

SPEAKER 4

Absolutely. The first ingredient is super concentrated astaxanthin, which truly works as an impenetrable molecular shield around the ocular stem cells. In a double blind study by Johns Hopkins University, it was proven to block the destructive action of any agent trying to damage the cells in the eyes, whether external or internal. Reports show that its use reduced oxidative damage to the retinal cells by an impressive 83.7%. When researchers at the Karolinska Institute in Sweden examined diabetic patients whose eyes are bombarded daily by sugar crystals, they found that those who used astaxanthin extract had 71% less macular deterioration compared to the control group. The second ingredient is Tibetan schisandra extract. It's a rare berry called the clear eye fruit by Tibetan monks. And in tests at the University of Tokyo, it was shown to awaken dormant ocular stem cells. In a paper published in the Journal of Ophthalmology, researchers documented how the extract increased stem cell activity by an astonishing 428% in just 72 hours. And finally, there was the third ingredient that left me absolutely stunned, stunned when I discovered it. It was the hybrid complex of rose and Jericho with zebrafish. Recent studies show that zebrafish is the only known vertebrate

capable of fully regenerating any organ after severe damage.
Can we show a clip of researchers talking about this on screen?

SPEAKER 3

Of course.

SPEAKER 4

So we all know that humans cannot regenerate tissue after injury, but there is.

SPEAKER 5

A species in nature that can regenerate.

SPEAKER 4

Almost every single organ after tissue damage, and zebrafish is one of them. We took advantage of the zebrafish as a model system to study these macrophages because they're transparent. So we can actually watch these cells in live embryos as they respond to tissue injury. So we wanted to know how the.

SPEAKER 5

Zebrafish can regenerate almost every organ and we cannot.

SPEAKER 3

That's truly impressive. I had no idea.

SPEAKER 4

It really is incredible. And along with the zebrafish, they also used extract from the the Rose of Jericho, which is known as the resurrection plant because it's a desert rose that can survive 50 years, completely dehydrated. But when it comes in contact with water, it literally comes back to life. And when researchers at Stanford University combined specific peptides from the zebrafish with rose of Jericho extract, they discovered that eye cells were regenerated.

SPEAKER 3

So basically, these studies prove that NASA's formula really does protect and can actually restore damaged vision, right?

SPEAKER 4

Exactly, Brad. But I still needed to test it to be sure it would actually work. So I called my friend, Dr. Michael Chen, a Harvard trained biochemist and specialist in molecular pharmaceutical development. I asked for his help. And I told him my father's vision depended on it. And we began working on an adventure advanced formula using those ingredients in the exact proportions.

SPEAKER 3

And you were able to replicate it?

SPEAKER 4

It wasn't easy at all, Brad. First, the super concentrated Astaxanthin wasn't the kind you find in any pharmacy

supplement. We needed a concentration 50 times stronger, extracted through a very specific process. The Tibetan Schisandra extract. We had to import it directly from monasteries in the Himalayas. And the hybrid complex of Jericho Rose with the zebrafish X. Let's just say we needed some special connections to get our hands on that. Dr. Chen and I worked day and night for two full weeks. We tested 27 different combinations until we landed on the perfect formula. And after all that effort, we finally had the first batch in our hands. Wow.

SPEAKER 3

And how did you know it would work?

SPEAKER 4

That's the thing, we didn't. Not until we tested it. And for a scientific test to be considered valid, you need to try it on dozens or even hundreds of people who suffer from the exact same condition. That's why I recruited 374 volunteers from my clinic, all suffering from serious vision issues. Ages ranged from 53 to 83. All of them had advanced macular degeneration, glaucoma, or diabetic retinopathy cases that conventional medicine would consider hopeless. Of course, my father was volunteer number one.

SPEAKER 3

And what was the result? Did it work?

SPEAKER 4

Well, why don't we let him tell you exactly what happened all himself? Dad, you want to join us again?

SPEAKER 5

Well, at first I didn't think it would work, but I agreed to try. After all, I had nothing to lose. During the first three days, I didn't notice any difference. But by the fifth day, I was ready to tell Thomas it was all useless. But he insisted some people were already seeing results. Then, on the morning of the eighth day, something strange happened. I woke up and I noticed the colors looked different, More vivid. I thought it was just in my head. But by the end of the second week, something happened that still gives me chills. I grabbed the milk jug and I could read the expiration date by myself. After a full month, I could see well enough to drive around the ranch. The dark spots had reduced by 40% in three months. I could thread a needle again, something I hadn't done in years. And the constant fear of going blind that haunted me every day and night. It was gone. After five months, my vision had recovered from by 92%. It was like being 35 again. And in the six month. Well, my son brought in an independent ophthalmologist to run some tests. He compared the results to my previous exams and was in shock. He has to redo the test three times because he couldn't believe it.

SPEAKER 3

And what did he say?

SPEAKER 5

He said I had 2020 vision.

SPEAKER 3

Perfect.

SPEAKER 5

He said he'd never seen anything like it and entire career.

SPEAKER 4

The most incredible thing, Brad, is that the hemorrhagic spots that I had seen just a few months earlier in him were completely gone. No scars, no marks, as if they had never existed. The stem cells literally regenerated my father's vision from the inside out. Thanks, dad. You can go back to that seat off camera if you want.

SPEAKER 3

Dr. Harper, this is simply amazing. And what about the other patients in the study? Did they see similar results?

SPEAKER 4

Brad, the results were shocking. 98.7% of the participants reported significant improvements in their vision within the first 30 days. After six months of use, 91% of them no longer needed glasses for daily activities. One result that made me especially proud. Of the 13th patients with advanced macular degeneration, 12 regained the ability to read without any aid. Ophthalmologist exams showed an average 93% reduction in retinal microhemorrhages. And 97% of participants reported that their floaters and dark spots had significantly reduced or disappeared completely.

SPEAKER 3

That's incredible. Can we hear from one of the volunteers?
Production. Let's get one of them on the screen.

SPEAKER 4

Hi there.

SPEAKER 3

I'm Frank Wilkins from Amarillo, Texas. Now, I worked in construction until I couldn't tell a hammer from a wrench two feet away. You see, the doctors talked about that macular degeneration thing. And that's why I started Dr. Harper's treatment.

SPEAKER 4

It was my last hope.

SPEAKER 3

But in just three short weeks, I could see the hands on my wall clock once again. And today, well, I'm fixing my grandson's toys without glasses. Thank you, Doctor.

SPEAKER 6

I was the pastor at Hope Baptist Church in Montgomery for 46 years. But when I started Losing my vision, I thought it was the end for me. How could I continue without reading the Lord's Word? But then a member of my congregation told me about

Dr. Harper's treatment. As a man of faith, I believe God works through science and medicine. How good is the Lord? After 40 days of treatment, I began to notice the letters were becoming clearer. Today, at 68 years old, I can read every word on these pages without any help.

SPEAKER 7

I'm Margaret Sullivan, but everyone calls me Peggy. I lived in Bloomington, Indiana, where I worked as a librarian for 35 years. The irony of a librarian who can no longer read, huh? My eyes haven't been good since I turned 50, but lately it became unbearable. That's until I started Dr. Harper's treatment. Today, just a few months later, I've rejoined my book club.

SPEAKER 3

Glasses?

SPEAKER 7

Don't need them anymore. And my ophthalmologist, Dr. Peterson, keeps asking me what I did. Thank you, Dr. Harper. You're an angel.

SPEAKER 4

Wow.

SPEAKER 3

Truly incredible stories, Dr. Harper. Tell me, after seeing such impressive results, what was your next step? I imagine you

started manufacturing the solution and making it available to all your patients, right?

SPEAKER 4

Exactly. As a doctor, I'm practically obligated to share this with as many people as possible. That's why over the past 18 months, I've worked tirelessly with Dr. Chen and a team of specialists to perfect and produce this formula on a large scale. We managed to import the rare ingredients and partnered with FDA certified labs to ensure the highest quality and safety.

SPEAKER 3

So you turned that secret NASA formula into a real product that everyday people can use at home. What's it called?

SPEAKER 4

It's called Visummax.

SPEAKER 3

I love the name. But what about other treatments?

SPEAKER 4

That's an excellent question, Brad. Vision Max works alongside any other treatment. In fact, it enhances whatever method you might already be using. For 12 years, I treated patients with conventional methods. Glasses, eye drops, injections, surgeries. But those only mask symptoms and can cause serious side effects like infections, hemorrhages, even retinal detachment. They don't treat the root cause of the problem,

which is ocular corrosion. And that ocular corrosion destroys stem cells. Visiam Max is the only formula that targets the root cause of vision loss. It protects your stem cells from sugar crystal damage and regenerates the ones already harmed. That's why today, in my New York clinic, every single patient who walks through the door is first recommended. Vision Max. Regardless of the stage of vision deterioration.

SPEAKER 3

That's truly impressive, Dr. Harper. And how many people have experienced the benefits of Visum Max so far?

SPEAKER 4

Brad, we are already on our 27th batch. In less than two years since the discovery, over 47,000 Americans have documented their transformations on our official website with before and after photos, comparative test results, and video testimonials. The results are consistent and verifiable. 94% report a drastic reduction in floaters during the first week. 89% can read without glasses after 60 days. And most impressively, 98% of advanced molecular degeneration cases showed significant retinal tissue regeneration on OCT scans after six months, something conventional medicine considered impossible until now.

SPEAKER 3

And how exactly should someone use Vision Mountain?

SPEAKER 4

Doctor? Just 20 drops under the tongue once a day, preferably in the morning. The formula is instantly absorbed through

sublingual receptors and goes straight into the bloodstream, reaching the eyes faster.

SPEAKER 3

And how long should someone use it to see full results?

SPEAKER 4

Most people start noticing the first changes within the first week. Colors appear more vibrant, eye irritation decreases, and floaters become less dense. But the complete process of ocular regeneration follows a well defined scientific pattern. We observe this in over 1200 patients at our institute. And there's a scientific reason for that. The first three weeks are dedicated to ocular deflamation, eliminating excess sugar crystals. Weeks four through 12 mark the phase of active regeneration when your stem cells begin repairing damaged tissue. And months four to six are the crucial ocular shielding phase, where the zebrafish complex builds a permanent protective shield around your stem cells. And let me give a very, very important warning here. We've had patients who, after seeing the first impressive results, thought they could stop using it. When they do that, it's like stopping an antibiotic halfway through. The problem can come back. And even worse, the stem cells need to complete their entire regeneration cycle.

SPEAKER 3

Doctor, I'm sure everyone watching right now is eager to get their hands on Vision Max. How can they do that?

SPEAKER 4

That's the tricky part, Brad. Our current stock is already fully reserved for returning customers. Even on our official website. The wait list is over three weeks long. And I need to make a very serious warning here. Do not buy Vision Max on ebay, Amazon, or any other marketplace. We've discovered several counterfeits circulating, some containing potentially dangerous ingredients. But I had a feeling this program would generate a lot of interest, so I personally reserved a special batch exclusively for those watching today.

SPEAKER 3

Wow, that's great. And what about the price? I imagine a treatment this revolutionary can be taken cheap.

SPEAKER 4

That's true, Brad, but the reality is, living with vision problems costs a lot more. Now, you at home, you know what I'm talking about, right? I'M not just talking about money. I'm talking about the cost. Of not seeing your grandson's smile when he runs up to hug you. Of not being able to recognize a friend waving at you from across the street. And those night drives, that early morning fishing trip. When we talk about the financial cost, the average American with vision issues spends \$3,900 per year on checkups, new glasses, eye drops and medications. Need intraocular injections for macular degeneration. Get ready to spend up to \$12,000 a year. And in the end, your eyesight is still poor. But you don't need to worry. You won't be paying any of that. Remember that little surprise I mentioned at the start of the show, Brad?

SPEAKER 3

Of course I remember. You had us all curious.

SPEAKER 4

Well, here it is. Today, right now, we're officially launching the Shielded Vision Campaign. The goal of this campaign is to restore the eyesight of every American silently suffering from ocular deterioration. As director of the Institute, I've made a decision that's going to seriously upset the pharmaceutical industries. We at the Institute are going to fund part of your treatment. So don't worry. You won't need to invest \$12,000 in injection treatments. Not even \$3,900 on traditional methods. Not even the original price of \$700 per bottle of Vision Max on our official website. No. Today, and only today, while we're live, or until the limited batch I reserved for this program runs out. Each bottle will cost just \$197. But I am not stopping there today, and only while we're live until the 2074 bottle stock is gone. I'm releasing three special kits from our Shielded Vision campaign with an offer we've never made before. In Kit 1, you can get one bottle of Vision Max for just \$69. In Kit 2, you get two bottles of Vision Max and the Institute will give you a third bottle completely free. That means each bottle costs just \$59. Now, Kit 3, the complete treatment kit. This is the option I personally recommend to all my private patients. You get three bottles and the Institute covers three additional bottles absolutely free. This ensures the full six month treatment for regeneration and permanent protection of your vision. You. And that's less than \$49 per bottle. In other words, less than \$1.50 a day to restore your vision and never worry about eyesight problems again. If you'd like to add a button below the video, Brad, that way all the viewers can just click below to secure their bottles of Vision Max.

SPEAKER 3

Perfect. Let's do it. Then. So if you're watching this program right now and want to start improving your vision this week, just click on the six bottle kit below this video.

SPEAKER 4

Video.

SPEAKER 3

Or choose the kit that best fits your needs. A doctor, two questions. And what about the shipping cost? Is there any guarantee that the product actually works?

SPEAKER 4

Great questions, Brad. Well, for the one bottle kit, shipping costs \$10. But for the three bottle and six bottle kits, shipping is 100% free anywhere in the U.S. as for the guarantee, well, when you see your own father need nearly lose his vision completely, when you feel firsthand the desperation of being unable to help the person who raised you, you develop an unshakable commitment to the truth. That's why we offer something that the big pharmaceutical companies and optical industries would never dare to offer. A full 180 day unconditional guarantee. That's right. A full six months of complete protection. Here's how it works. You choose the Vision Max kit that best suits your needs by clicking the button below. Your treatment arrives at your home within five business days and you have 180 days, a full half year to try it and see the results yourself. If you don't notice the floaters disappearing, if colors don't start to feel vibrant again like when you were young, if you still need help reading the fine print on your power bill or the newspaper, simply ask for your money back. No questions asked, no

complicated forms, no need to explain anything to anyone. Just send an email to my support team available 24/7 and we'll refund every penny of your investment. Why am I willing to take 100% of the risk? Because I am absolutely certain of what VisionMax will do for you. I've seen men aged 65, 78, even 94 literally cry in my office when they saw their grandchildren's faces clearly for the first time in years. I've seen people who had given up driving at night regain their full independence. I've also seen the dignity return to the eyes of those who thought they were doomed to live a life of slowly fading vision. If you use Vision Max every day as instructed, it's impossible to not require crystal clear vision and live free from progressive eye degeneration.

SPEAKER 3

That truly gives a lot of peace of mind, Doc. And how does the ordering process work? Is it safe?

SPEAKER 4

Completely safe, Brad. When you select your kit using the button below, you can be redirected to the Cart Panda checkout page, one of the largest and most trusted online payment processors in the world. Just fill out the form, add your name, email, shipping address and payment method and don't worry, Your information is 100% secure. Cartpanda uses advanced encryption technology, the same used by banks like bank of America and JP Morgan. This means your data isn't stored and your transaction is protected by the same security systems that safeguard the fortunes of America's wealthiest billionaires. So go ahead, click on the six bottle page package or any other kit you prefer and place your order right now. But wait, there is

more. I want to offer a few exclusive gifts to the viewers who are still watching this interview right now.

SPEAKER 3

Gifts? What do you mean?

SPEAKER 4

For the first 10 people who choose the complete six bottle kit today, I've got three special bonuses. First, those 10 individuals will receive a private consultation with me via Zoom where I'll put personally monitor their progress in restoring their vision and fighting off the eye corrosion that's been damaging their eyes.

SPEAKER 3

Wow, that's incredibly valuable. A one on one session with one of the country's top specialists.

SPEAKER 4

On top of that, they'll receive a signed copy of my book, Crystal the Ultimate Protocol for Ocular Regeneration along with their Vision Max bottles. And there's more. I'm also including a \$500 gift gift card to Rei Co Op.

SPEAKER 3

\$500? But why?

SPEAKER 4

Because when these people finally regain their vision, Brad, they'll be able to go back to doing all the activities they had given up. Hiking trails, bird watching, fishing, camping without the fear of tripping or falling. They'll need new gear to celebrate their restored eyesight. Many of our patients report that they get back to hobbies they hadn't practiced in years. Sometimes within just a few weeks of using Vision Max, finally free from the constant fear of poor vision.

SPEAKER 3

That's incredibly generous, Doctor. But is there something for those who aren't among the first ten?

SPEAKER 4

Absolutely there is. Everyone who secures the full six month bottle or three month kit today will be entered into a drawing for something truly extraordinary. Five lucky families will win an all expenses paid weekend getaway to Yellowstone National Park.

SPEAKER 3

The famous Yellowstone known for its breathtaking landscape.

SPEAKER 4

Exactly. Just imagine celebrating your restored vision in one of the most visually stunning places on earth. Taking in the vibrant colors of the Grand Prismatic spring, watching Old Faithful erupted sunset, spotting eagles and bison in the distance. And do you know why I specifically chose Yellowstone? Because it's a place where crystal clear vision makes all the difference. Many of our patients tell us that being able to once again

appreciate the natural beauty of the world around them was the most emotional part of recovering their sight.

SPEAKER 3

That's truly a once in a lifetime opportunity, isn't it.

SPEAKER 4

Oh, without a doubt, there is no better way to celebrate your restored vision than by taking in those words wonders while creating unforgettable memories with your family. Oh, and I almost forgot to mention, don't be surprised if your family is shocked by your transformation after just a few weeks on Vision Max. Many of our patients tell us their spouses thought they'd secretly had surgery. Recognizing faces from a distance, reading a restaurant menu without help, driving at night with complete confidence. It's like having the eyes you had at 25 all over again. That is the power of Vision Max.

SPEAKER 3

Dr. Harper, this is truly incredible. So if you're watching from home, don't wait. Choose your kit below right now.

SPEAKER 4

That's right, Brad. And let me emphasize this. Just one bottle of Vision Max begins to neutralize eye corrosion and reduce inflammation within weeks, minimizing those floating specks, easing eye strain, and enhancing clarity. Three bottles may be enough to spark a major transformation in your vision with more vibrant colors, sharper outlines, and renewed confidence in social settings. But six bottles. Six bottles of Vision Max can

shield your eyes not only from ongoing vision deterioration, but also from all the long term devastating complications caused by eye cream corrosion. I'm talking about issues like advanced macular degeneration, glaucoma, cataracts, retinopathy, and even cognitive problems that result from the progressive loss of visual independence. With six bottles, you're giving your body a real chance at full ocular regeneration, wiping away years of damage caused by sugar crystals. It's like turning the clock back and reclaiming the crystal clear vision you had at 25 or 35 years old.

SPEAKER 3

And what if someone's still unsure?

SPEAKER 4

Dr. Harper, if you still have doubts, I want to share a very special story with you that I received recently. Mr. Richard Johnson emailed me saying that when he saw Vision Max on a program like this, he felt so hopeful that he immediately ordered the six bottle kit. But when he told his son, who's an ophthalmologist, his son was very significant, skeptical, and said it was probably just another one of those vision products that don't work. So Richard decided to request a refund. And guess what? Within minutes, he got all his money back and even a message saying, keep the product and keep trying it. That gave him the confidence to truly give Vision Max a shot. Now, just three weeks later, Richard wrote me saying he no longer needs help to read the newspaper in the morning, that he can recognize people on the street for the first time in years, and that his grandkids noticed a huge difference when he was finally able to tell them apart from a distance at a family gathering. In his message, Richard thanked us for offering the

180 money back guarantee because it allowed him to try it risk free and to reclaim his dignity and his independence.

SPEAKER 3

That's extraordinary.

SPEAKER 4

Look, this is truly a can't miss opportunity. So click the button below on this video and choose the kit that best suits your needs. Payment is 100% secure and your vision Max will arrive at your home within five business days. But remember, the special offer, the exclusive bonuses and the reduced prices are only available while this interview is airing or while supplies last. And honestly, Bright Brad, once the last bottle is sold, it could take up to four months before we have a new batch available.

SPEAKER 3

So if you're watching this now, don't waste any time. Click the button below right now and secure your visom max kit. Dr. Harper, we're nearing the end. Any final message?

SPEAKER 4

Yes. Look, if you're watching this right now and still haven't made your decision, I'm asking you to give us a vote of confidence. I know you might feel hesitant about facing the eye corrosion that's been destroying your vision and reclaiming your independence. And that's okay. But the truth is, if you don't take action, your vision will only get worse. I've seen it happen to my own father, so I know exactly what you're going through. The embarrassment of sitting in a restaurant and not being able to

read the menu. The frustration of trying to recognize a friend, friend waving from across the street. The humiliation of having your children offer you their arm to go down a set of stairs like you're a helpless elderly person who can't take care of themselves. But unfortunately, if you do not do something different right now, there's no way your vision will improve. The damage will only keep progressing. And deep down, you know that.

SPEAKER 3

Dr. Harper, that's hard to hear, but I know you're saying it because you truly care about the people watching us, right?

SPEAKER 4

Yes, exactly. And that's why I'm asking you to simply give us a vote of confidence. Our 180 day guarantee is there for a reason. To eliminate the risk for you. All we want is to see people regain the dignity of seeing for themselves. If that doesn't happen, we return your money. You literally have six months to try it out completely risk free. So if you're ready to fully restore your vision, all you need to do is choose your preferred kit below, take advantage of the special discount and begin your journey today. There are no hidden Fees? No automatic subscriptions. Just a one time investment in your quality of life. Remember, Vision Max is only available here through this program. And every purchase is protected by my 180 day saving satisfaction guarantee. You have absolutely nothing to lose and a lifetime of clear vision to gain. By the way, that hesitation you're feeling right now, that paralyzing doubt when the decision seems so obvious, do you know where that comes from? From your brain struggling with the neurological impact of eye corrosion. It's scientifically proven. When the

brain isn't receiving clear, reliable visual information, it triggers defense mechanism that lead to hesitation, fear and indecision. And the longer you live with deteriorated vision, the more those mechanisms become your new normal. But I can't do anything else for you at this point. I've revealed the secret. I've shown you the path. Now only you can choose how to move forward.

SPEAKER 3

That's true, doctor. Each person has to make that decision for themselves.

SPEAKER 4

Exactly, Professor Brad. Now it's time to act. You're standing at a crucial crossroads in your life. And right now you only have two options. Each leading to a completely different future. Option one is to stay where you are. Do exactly what the billion dollar eyeglasses and eye drop industry wants you to do. Spending the rest of your life chained to thicker and more expensive glasses, eye drops that irritate your eyes. And painful injections that only matter mask symptoms but never fight the real cause. The eye corrosion. Silently destroying your stem cells from the inside out. Choosing not to act now means accepting a life of increasingly limited means by worsening your vision. It means planning every trip outside based on lighting conditions. And it means never driving at night again. It means watching your children and grandchildren slowly lose their patience with you as your relationship turns into dependency and obligation. And worse, it means accepting the inevitable. Reaching a point where a cane and a guide dog become part of your daily reality. Where your dignity as an independent human being is completely stripped away. I know that it's not what you

want. And I seriously doubt you would have stayed with us this long if you were willing to settle for such a humiliating future.

SPEAKER 3

Powerful words, doctor. But there is hope, right?

SPEAKER 4

Absolutely. If I'm being this direct, it's because I don't want to see anyone suffer needlessly from a condition that can be naturally and permanently reversed. The door to a life of crystal clear vision is right in front of you. I've opened it for you. All you need to do is take one step forward and walk through it. And that's why I ask you to seriously Consider option two, a choice that lets you say goodbye to optimistic corrosion and vision problems for good. Imagine waking up every morning and seeing every detail of the world around you with perfect clarity. Imagine driving at night with complete confidence, reading every sign, every turn with absolute precision. Imagine the pride in your grandchildren's eyes when you're able to read to them again flawlessly, without stumbling over a single word. Think about all the money you'll save when you no longer have to spend it on new glasses every year, expensive eye drops, countless eye doctor visits or invasive surgeries. Money you can invest in your dreams, like that trip to the Grand Canyon you've always wanted to take. Or breathtaking visual experiences you'll finally be able to enjoy in all their glory.

SPEAKER 3

Dr. Harper, that really puts everything into perspective. I think the choice is correct.

SPEAKER 5

Clear.

SPEAKER 3

For anyone watching, the choice is yours.

SPEAKER 4

It always has been. But now you have access to knowledge that was once reserved for a select few. Click the button below and begin your journey to crystal clear vision right now. I hope that in just a few weeks, we at the institute will be able to receive your testimonial video showing how your life has completely transformed. Like night and day with Vision Max.

SPEAKER 3

Perfect to everyone at home, don't miss this opportunity. We're reaching the end. Get your kit right now by selecting the option below this video. Doctor, before we wrap up, we have a few questions from viewers watching at home. Let's answer some of them to clear up doubts that came up during our conversation.

SPEAKER 4

Absolutely, Brad. I'd be happy to answer questions from any of our viewers. It's very important that everyone fully understands how Vision Max can transform their lives.

SPEAKER 3

William from Michigan asked, doctor, My visual clarity improved drastically in just the first week of using Vision Max. Why did it happen so quickly? Is that normal?

SPEAKER 4

Excellent question, William. And don't worry, that quick improvement is completely normal and safe. You know why? Because Vision Max directly targets the true root, root cause of your vision problems. Eye corrosion, which is destroying your stem cells and damaging your eyes. By neutralizing the sugar crystals and activating dormant stem cells, Vision Max allows your body to immediately begin the repair process. That's why you experience such a fast and noticeable improvement in visual sharpness, regaining a level of clarity that you haven't felt in years. In the first week alone, beyond gradually clear clearing your vision, our patients report several major improvements. Colors appear more vibrant, eye irritation and fatigue decrease significantly. And those floaters begin to fade away. And the most amazing part, by completing the full six month treatment, many are stunned to realize not Only have their symptoms disappeared, but their vision has been fully restored in every sense. It's like getting a brand new pair of eyes with without the constant fear of progressive deterioration or the burden of thicker and thicker glasses.

SPEAKER 3

Now we have a question from Margaret in Florida. She says. Dr. I have to admit I was skeptical about Vision Max because I've tried so many other vision products without success. But after completing the six month treatment, I have no more doubts. My vision is crystal clear and I can read the newspaper

without glasses for the first time in 15 years. Why is Vision Max so different from everything else I've tried before?

SPEAKER 4

Margaret, I'm absolutely thrilled you gave Vision Max a chance and experienced such a life changing result. You're bringing up a crucial point about what truly makes our formula unique. Vision Max is the first and only supplement specifically designed to eliminate eye corrosion and regenerate ocular stem cells. Thanks to its precise combination of three revolutionary ingredients. Super concentrated Astaxanthin, Tibetan Schisandra extract and the hybrid complex of Jericho Rose with zebrafish. While some of these ingredients are mentioned in isolated scientific studies, our team pioneered an extraction process that preserves and enhances the bioactive compounds in these rare ingredients. Especially the high hybrid complex of Jericho Rose with zebrafish, which requires advanced biotechnology techniques. This means that unlike common over the counter supplements, Vision Max delivers a much higher concentration of these compounds in their purest and most bioavailable forms. On top of that, our formula was designed for fast sublingual absorption and maximum convenience. You can simply place the drops under your tongue in the morning, allowing the active compounds to enter directly into the bloodstream and reach your eyes within minutes. And the best part, Vision Max is non addictive, has no known side effects and can be safely used alongside other eye medications, always under the supervision of your ophthalmologist. And that's why I confidently say Vision Max is the only solution that can naturally and permanently reverse vision problems, freeing you from limitations, embarrassment and worry once and for all.

SPEAKER 3

That's truly inspiring. Dr. Harper Richard from Ohio shared an incredible story. He said, I just finished the six month treatment with Vision Max and my ophthalmologist was blown away by the responsive results. He had never seen a patient reverse macular degeneration so completely. Now he's considering recommending the treatment to others. What do you think Dr. Richard?

SPEAKER 4

I'm extremely happy and honored to hear that your doctor recognized the transformative power of Vision Max. Unfortunately, many people still doubt that reversing vision problems is possible because they've been conditioned to believe it's a progressive and irreversible condition. On top of that, the flood of ineffective products on the market has understandably led to skepticism, even among professionals. But what truly makes Vision Max unique is the groundbreaking science behind our formula. Unlike other products, we target the root cause of the problem. The eye corrosion that destroys your stem cells and damages your ocular structures. Our precise combination of those ingredients was specifically designed to eliminate sugar crystals and regenerate eye tissue in a safe and lasting way. That's why even ophthalmologists with decades of experience are stunned when they see the transformation in patients who complete the six month treatment. The results are simply unmatched by any other treatment available. So, yes, Richard, tell your doctor he can recommend Vision Max with full confidence. Our team of specialists is always available to answer any questions and provide all the scientific and technical support needed. What matters most is that together we're changing the lives of thousands of Americans, restoring not just vision, but also the

independence, confidence and quality of life that were stolen by progressive ocular deterioration.

SPEAKER 3

Susan from Texas wrote, I ordered three bottles of Visimax and they arrived the very next day super fast. I'm loving the treatment and I can already read messages on my phone without having to bring the screen up close. My ophthalmologist said my retina already shows signs of regeneration. Now, I regret not buying the full six month treatment right away. Is it still possible to place another order?

SPEAKER 4

Susan, I'm extremely happy to hear that you're already experiencing such promising results with Vision Max. I completely understand your desire to secure the full treatment for deeper and longer lasting regeneration. The challenge is that ever since my discovery went viral in health communities, we've had an unprecedented surge in orders. Last time I checked with my team, we only had a few batches of Vision Max left in stock. As I mentioned during the interview, each batch of our supplement takes three to four months to produce. That's because we insist on using only the purest and rarest ingredients, especially the Tibetan Schisandra extract, which we import directly. Directly from remote monasteries in Tibet. Also, the extraction process we developed to enhance the bioactive compounds is extremely complex and time consuming. It takes several weeks to complete. But it's precisely this care and precision that ensures the unmatched effectiveness of vision medics. So, Susan, if you want to take this opportunity to complete your treatment, my recommendation recommendation is to place your order as soon as possible while we still have a

few bottles available, of course. Because once this batch runs out, it may take up to four months before we can produce more. Someone who starts but does not complete the full six month treatment risks the gradual return of eye corrosion and with it the vision problems that may come back. It's as if the sugar crystals develop resistance. That's why complex completing the full cycle is crucial to eliminate this destructive process for good and permanently protect your stem cells.

SPEAKER 3

Very important information, doctor. To close out, we have a question from Frank in Illinois. He says, how can I be sure Vision Max will work for me? I've been dealing with vision problems for over 15 years and have lost hope. I also have other health conditions like diagnosis, diabetes and high blood pressure.

SPEAKER 4

Frank, I deeply understand your hesitation after so many years of struggling with vision problems. But I want you to know there is hope, no matter how long you've been dealing with this condition or how severe it may seem. Vision Max has been extensively tested on hundreds of volunteers with an impressive success rate of 97%. It's proven effective for both young and older individuals ranging in ages from 45 to 90, whether newly diagnosed or suffering from vision issues. For decades, we've seen transformative results across all kinds of cases, from mild to severe. Even patients with very serious conditions like advanced macular degeneration, pre surgical stage cataracts and high pressure glaucoma experienced several improvements with Vision Max. So think about it. If our revolutionary formula worked for the most extreme and complex

cases, why wouldn't it work for you too? And here's some great not only is Vision Max perfectly safe for people with other health conditions like diabetes and high blood pressure, it can even help improve those conditions. In fact, Frank, you mentioned diabetes, and that's especially relevant. As I explained earlier, excess sugar in the bloodstream is one of the key factors that can worsen eye corrosion. By directly fighting the effects of sugar crystals in the eyes, Vision Max provides vital protection particularly beneficial for people with diabetes. So rest assured, Vision Max is clinically proven to be safe and effective for everyone, regardless of medical or health history. I have full confidence it will work for you, just as it has for over 4,47,000 Americans of all ages, backgrounds and health conditions. And if for any reason you're not 100% satisfied with the results, remember, you're covered by our unconditional 180 day guarantee. No questions asked, no hassle, just a full refund. You literally have nothing to lose except that blurry vision that's robbing you of your independence and quality of life.

SPEAKER 3

Dr. Harper, thank you so much for answering all these questions and for sharing your incredible discovery with us today. I'm sure it will change the lives of thousands of people watching right now.

SPEAKER 4

The pleasure was all mine, Brad. It's an honor to help so many people reclaim the precious gift of crystal clear vision.
