Basic Rules and Guidelines

-Dolphin 5.0 (Vanilla) is recommended to use although you can use any version you want. *Later versions are known to be slower by comparison.*

- Races will be determined by In Game Time (IGT) unless a player crashes. If a crash occurs, said player will load the nearest save at or before the incident. From then on, the race will be determined by Real Time Attack (RTA). In order to prevent this, **MAKE SURE TO USE AN ISO AND NOT NKIT** this will cause crashes!

- FPS **MUST** be shown in full view in your game window capture.

- Game sound must be outputted through your stream. You do not need to listen to it yourself but for the sake of the stream we ask for you to output your game sound. Seeding will be determined by leaderboard placement according to the date given below. If a runner has a console time, it will be converted to emulator time to determine placement. If a runner has neither, the lowest seed will be given.

- If a tie in IGT happens, a best two out of three Liquid fight will happen. The time remaining on the last hit of Liquid will determine how we time the fight. Double check that you have a Very Easy Liquid save. One is provided in the Very Easy save pack here: <https://www.speedrun.com/mgstts/resources>
