GRACE CHRISTIAN SCHOOL

Lower Campus STEM Overview

At GRACE Christian School, we believe that technology is a powerful tool for enhancing learning and preparing our students for the 21st century. Our lower school utilizes a variety of technology resources to support our curriculum and foster a collaborative and engaging learning environment.

iPad Carts for Early Learners
Our youngest students benefit from iPad carts, which provide access to educational apps, games, and interactive resources. These devices support early literacy, math skills, and creative expression.

One-to-One iPads and Keyboards
Students in grades 4-6 are equipped with their own iPads and keyboards, encouraging them to develop essential typing skills. This one-to-one technology empowers students to access a wide range of digital tools and resources for their learning.

Electronic Resources for Remediation and Project-Based Learning
We utilize electronic resources to provide targeted support for students who may need additional assistance. Our remediation tools offer personalized practice and feedback, while our project-based learning resources inspire creativity and critical thinking.

Interactive Boards for Immersive Learning
Interactive boards in our lower grades create a dynamic and engaging learning experience. Students can manipulate, explore, and interact with digital content, making learning more interactive and memorable.

A Future-Ready Foundation
By integrating technology into our curriculum, we are equipping our students with the skills and knowledge they need to succeed in a rapidly changing world. Our commitment to technology-enhanced learning ensures that our students are prepared to thrive in the digital age.
